1. Introduction

The Minnesota Pollution Control Agency (MPCA) retained AECOM Technical Services, Inc. (AECOM) to conduct a Limited Phase I Environmental Site Assessment (Limited Phase I Inventory Assessment) for the Project 1007 area.

The purpose of this Limited Phase I Inventory Assessment is to identify known or potentially sources (referred to as Sites in this report) of (per- and polyfluoroalkyl substances) PFAS within the Project 1007 area unrelated to the two known primary PFAS sources areas in central Washington County: the Oakdale Disposal Site and the Washington County Landfill. The John Wood Group, PLC (Wood) developed a protocol to evaluate and prioritize PFAS source locations across the State of Minnesota. AECOM used Wood's protocol as a guide to develop a modified Inventory Ranking Procedure (Ranking Procedure) to identify additional potential PFAS source locations within the Project 1007 Investigation Area with few modifications to the original protocol (Wood, 2018).

The Project 1007 Inventory Investigation Area (Investigation Area) was determined by identifying the greatest distance between a Project 1007 infrastructure feature and the sub-watershed drainage boundary. This 11,400-foot distance was used to generate a perimeter that encompasses the entire Valley Branch Watershed drainage area. The buffer was then truncated on the eastern side where it intersects the St. Croix River, so the potential Sites identified were limited to those located in Minnesota.

1.1 Scope of Work

AECOM's FY20 scope of work included a Limited Phase I Inventory Assessment. The Investigation Area includes properties within an approximately 61.6-square mile area. The project location and the Investigation Area are presented on **Figure A-1**.

The scope of work for this Limited Phase I Inventory Assessment included:

- A review of readily available topographic, geologic, and hydrogeological information relating to the Investigation Area;
- A review of readily available information relating to historical land use within the Project Area, including historical maps, and aerial photographs;
- A review of federal, state, and local regulatory database search results of potential environmental hazards associated with Sites of Concern within the Investigation Area;
- A review of the Minnesota Well Index (MWI) for wells and Wellhead Protection Areas located within the project area;
- An environmental records review using search tools: Research America, EDR, and Made in Minnesota;
- Identifying properties encompassed by the Investigation Area as having known or potential environmental conditions related to PFAS contamination. An identified known or potential source Site indicates the presence or likely presence of PFAS substances on a property under conditions that indicate an existing release, a past release, or a material threat of release of PFAS into structures on the property or into the ground, groundwater, or surface water of the property.

1.2 Study Limitations

This report describes the results of AECOM's Limited Phase I Inventory Assessment to identify the presence of contamination-related liabilities that may be materially affecting the Project 1007 Investigation Area. In the conduct of this assessment, AECOM assessed the presence of such problems within the limits of the established scope of work as described in our proposal.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time

of AECOM's assessment of the Investigation Area. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions.

2. Physical Setting

Published information reviewed as part of this Limited Phase I Inventory Assessment included United States Geological Survey (USGS) 7.5 minute Quadrangle maps, Minnesota Geological Survey (MGS) hydrogeologic and geologic maps.

2.1 Physiographic Review

Cities fully within the Investigation Area include Oakdale, Lake Elmo, West Lakeland TWP, Lakeland Shores, Afton, Pine Springs, and Lakeland; North St. Paul and Woodbury are only partially included on the western edge of the Project 1007 Investigation Area (**Figure A-2**). While a majority of the Investigation Area is primarily located within Washington County, it does extend slightly into Ramsey County in the northwest corner.

Major highways within the buffer zone include Interstate 94 (I-94) which runs west-east from St. Paul to Lakeland and Interstate 694 (I-694) which runs north-south from Pine Springs through Oakdale. Major industries within Washington County include manufacturing, health care and social assistance, and retail trade. Notably, farming and small-scale ranching are both common throughout the region as well.

2.2 Geological Review

A series of geological maps and cross-sections produced by the MGS (Bauer 2016) indicate that the geology of the Twin Cities area consists of Precambrian basement rock situated below Cambrian and Ordovician stratigraphy that is subsequently overlain by unconsolidated Quaternary glacial sediments.

The East Metro Area in Washington County is dominated by unconsolidated Quaternary glacial sediments from the Superior lobe, the Des Moines lobe, and sediments transported from glacial Lake Agassiz. Near-surface materials throughout the county can be divided into three main groups. The northwestern region of Washington County is comprised of fine-grained loamy New Ulm till; the southeast portion of the county primarily consists of sandy glacial sediments and shallow bedrock; the remainder of the county consists of the St. Croix moraine – which runs across the county southwest to northeast from St. Paul Park to Bayport (Berg 2019).

The depth to bedrock across Washington County is generally 150 – 200 ft below ground surface (bgs). The MGS identifies multiple bedrock units that include, from youngest to oldest in ascending order:

- Decorah Shale and Platteville and Glenwood Formations;
- St. Peter Sandstone – Tonti and Pig's Eye Members;
- Shakopee Formation;
- Oneota Formation;
- Jordan Sandstone;
- St. Lawrence Formation;
- Tunnel City Group - Mazomanie Formation (aquifer) and Lone Rock Formation;
- Wonewoc Sandstone;
- Eau Claire Formation; and
- Mt. Simon Sandstone.

2.3 Hydrogeological Review

Groundwater elevations throughout Washington County vary significantly but are divided into three major zones: the northwest, where groundwater is relatively shallow from 0-20 ft bgs; the central region which has variable depths to water that ranges from 0-40 ft bgs; and the eastern zone where the groundwater is highly variable with water table depths at 50 ft bgs and deeper (Berg 2019). Groundwater is found in both

surficial unconsolidated aquifers as a result of glaciation as well as bedrock aquifers. The four main aquifers include the St. Peter Sandstone, the Prairie de Chien Group, the Jordan Sandstone, and the Tunnel City Group. While these layers are separated by “leaky” aquitards, bedrock faults and vertical joints cause increased vertical hydraulic conductivity between these major aquifers (Yingling 2015).

The general direction of groundwater flow tends to be from the center of the county outwards in all directions where a regional groundwater divide has been identified (Yingling 2015). More specifically, the eastern portion of Washington County flows east-southeast towards the St. Croix River and the southern portion flows southwest towards the Mississippi River (Berg 2019).

PFAS impacts of municipal wells, residential wells, and surface water bodies have been observed throughout the Project 1007 Corridor. Aquifers spanning from shallow, Quaternary water table aquifers down to the St. Lawrence Formation have known PFAS groundwater impacts.

AECOM completed a search for prominent water bodies in the Investigation Area using publicly available shapefiles and Google Earth to verify consistency of water body names. A list of prominent surface water bodies within the Investigation Area is provided below:

- Lost Lake
- Lake Washington
- Echo Lake
- Long Lake
- Weber Pond
- Silver Lake
- Lake De Montreville
- Clear Lake
- Lake Olson
- Lake Jane
- Mud Lake
- Sunfish Lake
- Lake Elmo
- Eagle Point Lake
- Margaret Lake
- Downs Lake
- Horseshoe Lake
- Armstrong Lake
- Goose Lake
- Lake Edith

2.4 Private Wastewater Facilities

A section of the 2005-2030 Lake Elmo Comprehensive Plan identified Private Community Wastewater Treatment Systems (WTSS) in Lake Elmo that were constructed in various parts of the City since 1998 (Lake Elmo, 2013) and are generally located in newly constructed residential neighborhoods. These Wastewater Treatment Systems include “Wetland Treatment Systems”, “Community Drainfield Systems”, and city-owned shared WTSS. Private Community WTSS are small and treat up to 135 homes while city-

owned shared WTSs range in design flows from 450 gallons per day (GPD) to 4,440 GPD. Because these WTSs have the potential to treat and/or retain PFAS-impacted sediments or surface water, these locations were included in this assessment and are depicted on **Figure A-3**.

2.5 Project 1007 Conveyance System and Known Sources Areas

Project 1007 hydrologically connected two known source areas, the Oakdale Disposal Site and the Washington County Landfill and modified the conveyance of surface water and groundwater near and downstream of Eagle Point Lake. Raleigh Creek bisects the Oakdale Disposal Site and likely contributed to decades of PFAS-impacted water migration downstream through surface water flow and surface water infiltration into groundwater. Raleigh Creek merges with the Project 1007 conveyance system north of Eagle Point Lake near Tablyn Park.

The Washington County Landfill is located in a landlocked subwatershed. For this reason, surface water discharges emanating from the landfill would have been hydraulically limited during the landfill's operation (1969-1975) and in subsequent years. However, beginning one year after completion of Project 1007, untreated discharges from one of the landfill's remediation gradient control wells was connected to the Project 1007 conveyance system north of 34th Street North (CR 14). These discharges occurred between 1988 and 1995 and contributed to eight years of additional PFAS-impacted surface water migration (reported to be approximately 50M-80M gallons per year) through the Project 1007 conveyance system.

3. Summary of Inventory Ranking Procedure

AECOM used Wood's protocol as a guide to develop a Ranking Procedure that used the following steps to identify and rank potential Sites of Concern.

1. Development of a potential Site of Concern list using the North American Industry Classification System (NAICS) database and ranking the sites 1 – 4 based on NAICS code. The NAICS code is a six-digit number that is used by businesses to classify the major activities conducted at their establishment. A secondary industry classification scheme called the Standard Industrial Classification (SIC) code was also cross-referenced with NAICS codes, where applicable, to identify years that were listed for a specified SIC code activity for an establishment.

A revised list of rankings by NAICS code and any associated SIC codes is provided in **Table A-2**. Each Site was awarded points according to its designated ranking:

- High Risk Rank = 4 points
 - Medium to High Risk Rank = 3 points
 - Medium Risk Rank = 2 points
 - Low Risk Rank = 1 point
2. Determine which Sites are within 500 feet of a wellhead protection (WHP) area. Wellhead Protection Areas were identified using a GIS-ready shapefile provided by the Minnesota Department of Health (MDH) and was used without modification or verification (<https://gisdata.mn.gov/dataset/water-wellhead-protection-areas>). If a Site is within 500 feet of a WHP, it was awarded 3 points.
 3. Determine the aquifer sensitivity of the Site. According to the Groundwater Atlas of Washington County, Minnesota (Berg 2019), the near-surface materials of southeastern Washington County are designated into four (4) categories of Pollution Sensitivity based on Vertical Travel Times. In addition to these four designations, areas of near-surface highly permeable karst were also identified. The Vertical Travel Times are as follows:
 - High: hours to a week
 - Moderate: a week to weeks
 - Low: weeks to months
 - Very Low: months to a yearPublicly available GIS-ready shapefiles were used to identify these areas of greatest pollution sensitivity. Each Site was awarded points according to its pollution sensitivity designation:
 - a. Karst or High Vertical Travel Time (hours to a week) = 5 points
 - b. Moderate Vertical Travel Time (a week to weeks) = 3 points
 - c. Low or Very Low Vertical Travel Time (weeks, months, or a year) = 1 point
 4. Determine the proximity of a Site to a public water supply well. A shapefile containing locations of wells, including private and public supply wells, throughout the state of Minnesota was obtained from the Minnesota Geological Survey and was used without modification. Because wells represent potential direct conduits of PFAS from the surface to groundwater aquifers and the role of aged or poorly constructed wells on PFAS migration is poorly understood, all wells including abandoned or inactive wells located within the Investigation Area and within proximity to identified Sites of potential risk were included in the assessment.

However, only wells with a Use Code of Community Supply (PC), Public Supply/Non-Comm-Transient (PN), Public Supply/Non-Comm-Non-Transient (PP), or Public Supply/Non-Community (PS) were used to identify Public Supply Wells that are not publicly made available on the Minnesota Well Index (MWI) online database

(<https://www.health.state.mn.us/communities/environment/water/mwi/index.html>).

These public supply wells were included in the Site Ranking Procedure as follows:

- Public supply wells within 100 feet of a Site = 5 points
 - Public supply wells within 500 feet of a Site = 3 points
 - Public supply wells within 1,000 feet of a Site = 1 point
5. Determine the proximity of a Site to a surface water body. The United States Geological Survey (USGS) manages the National Hydrography Dataset (NHD) where publicly available GIS-ready shapefiles of water bodies were used to identify Sites within a close proximity (<https://www.usgs.gov/core-science-systems/ngp/national-hydrography>). If a Site is within 500 feet of a water body, it is awarded 3 points.
6. After all points in Steps 1-5 are accounted for, an Overall Site Score and Site Rank Designation is determined for each potential Site of Concern. **Figure A-3** and **Table A-1** present the identified Sites by Overall Site Score. Overall Site Scores and Site Rank Designations are as follows:
- Low Potential Risk (0 – 5 points)
 - Medium Potential Risk (6 – 10 points)
 - Medium to High Potential Risk (11 – 15 points)
 - High Potential Risk (16 – 20 points)

4. Environmental Records Review

Both proprietary and publicly available databases were searched to identify Sites with potential risk of PFAS contamination. A brief summary of each database used, and the type of search completed is provided below.

4.1 Research USA Current Sites

The Research USA Business database is maintained by InfoGroup, Inc. (Research USA) and was queried by specific NAICS codes to identify potential Sites that are listed as currently operational. A total of 20 current Sites were identified using the Research USA database (<http://resource.referenceusa.com/available-databases/>).

4.2 Research USA Historic Sites

The Research USA database was queried to identify potential historic Sites. In all, 416 historic Sites were identified using the Research USA database.

4.3 EDR PFAS Sites

For the purposes of identifying historical business operations of potential PFAS risk, the EDR package included historical imagery and maps of the Project 1007 Investigation Area. EDR identified two PFAS sites during their database search.

4.4 EDR Non-PFAS Sites

For the purposes of identifying historical business operations of potential PFAS risk, the EDR package included historical imagery and maps of the Project 1007 Investigation Area and provided regulatory IDs associated with any Sites listed, which were also cross-referenced with the What's in My Neighborhood online database (<https://webapp.pca.state.mn.us/wimn/search/advancedSearch>). Locations previously identified as Sites of potential PFAS risk were co-located for regulatory ID information using this database report. EDR identified 2,357 non-PFAS sites in their database search. The list of EDR non-PFAS sites was paired down to 164 Sites after an initial duplicate check.

4.5 Made in Minnesota Sites

The Made in Minnesota database of Minnesota-based manufacturers was accessed in 2019 and queried by NAICS Code. Five Sites were either added or co-located with a Site previously listed on another database report. As of July 2020, the Made in Minnesota online database is no longer active.

5. Historical Land Use Review

Historical resources were reviewed to identify any notable past land use or modifications to the ground surface in the Investigation Area that may potentially contribute to past or current increases in surface infiltration and the possible migration of contaminants within the Project 1007 Investigation Area.

5.1 Aerial Photograph Review

Historical aerial photographs for 1947, 1949, 1953, 1957, 1966, 1970, 1974, 1980, and 1986 were obtained from Historical Information Gatherers (HIG). Aerial photographs for 1991 through 2019 were viewed using publicly available Google Earth Pro historical aerials. Some observations were limited due to the quality and scale of the available aerial photographs. Corridor land uses apparent on the aerial photographs include, but are not limited to, residential development, commercial/industrial development, county road or interstate construction, and geomorphological changes in the landscape. The table below provides the date of photos and observations from the aerial photograph review. Aerials were subdivided into “Areas” across the Investigation Area and copies of the aerial photographs are provided in **Attachment A-2**.

Aerial Area(s)	Year(s)	Observations
H, I	1947	Surface disturbances visible west of Hadley Ave N, likely dumping activities associated with Oakdale Disposal Site
J	1947	Potential sinkhole or permafrost slump northwest of Sunfish Lake; created a small drainage system that connects directly to Sunfish Lake
S, V	1947	Possible quarry, extensive site surface disturbances, near Division Ct S and Quinlan Ave S
U	1947	Possible permafrost slump creating fan-like drainage into Lake Edith, west of Osgood Ave
H	1953	Minor surface disturbances, likely dumping activities associated with Oakdale Disposal Site on the northern edge of known disposal extent
H, I	1957	West-east expansion of Oakdale Disposal Site dumping area on the northern and southern ends of the known disposal extent
R	1957	Large site development (surface disturbances) near Neal Ave N and Neal Ave Ct N
H, I	1966	Extensive razing of site likely due to construction of I-694 near 34th St N
M, N	1966-1986	Early site development (surface disturbances) of Royal Golf Club/Former 3M property
F	1970	Large site development (surface disturbances) in property adjacent to Washington co. Landfill (Jamaca Ave N and 37th St N)
F, G	1974	Expansion of dump area, south of Lake Jane east of Jamaca Ave N
R, U	1980	Site development (surface disturbances) north of current I-94 Rest Area
R, U	1947, 1953	Historic tributary of Valley Branch Creek, crosses I-94 near Neal Ave S and Hudson Rd S
O, S	1953, 1966, 1974-present	Possible quarry or pit, extensive site surface disturbances, north of I-94 near Hudson Blvd N (currently owned and operated by Aggregate Industries)
X	1953, 1970	Possible quarry, extensive site surface disturbances, near Stagecoach Trl S and Valley Creek Tr S
R	1957, 1966	Quarry and site development (surface disturbances), followed by a broad westward expansion in 1966 (east-southeast of smaller West Lakeland North Pond)
N	1966, 1970, 1980	Large site development and expansion (surface disturbances) near Manning Ave N and 18th St N
R, S, U	1966, 1974	Large site development (surface disturbances) south of I-94 along Hudson Rd S, west of Stagecoach Trl N
S	1986-present	Possible quarry or pit, extensive site surface disturbances north and south of I-94 (north property currently the Barton Gravel and Sand Co. Pit, south property currently Minnesota Paving and Materials)

5.2 Fire Insurance Maps

Fire insurance maps were historically published to aid the fire insurance industry in assessing potential fire and explosion hazards associated with developed properties. As a result, these maps often give an indication of potential environmental concerns, including the locations, sizes and contents of chemical and petroleum storage tanks, chemical and petroleum storage areas, and electrical equipment. These maps also typically depict physical and cultural features such as buildings, addresses, property names, land uses, property configuration, and other miscellaneous information.

EDR provided maps from the Sanborn Library collection that includes real estate atlases, and similar maps indicating land use or ownership for the project area. AECOM reviewed available Fire Insurance Maps

(FIMs) for the years 1884, 1888, 1890, 1981, 1900, 1903, 1910, 1912, 1924, 1925, 1927, 1941, 1945, and 1952 for available sections of the Project 1007 corridor. Any potentially pertinent information related to historical contamination identified during the FIM review and the nearest intersection of the identified establishments are provided below. FIMs are provided in **Attachment A-2**.

Year	Business	Intersection of Sanborn	Present Intersection	Notes
1952	Oil Pump	End of Main St, along tracks.	End of Upper 33rd St N	Lake Elmo FIM
	Auto Service Sales	Elmo Rd/Railroad Ave	Lake Elmo Ave N/33rd St N	Lake Elmo FIM
	Auto Repair	Elmo Rd/Main	Lake Elmo Ave N/Upper 33rd St N	Lake Elmo FIM

	Fill Station	7th Ave E/Division NE	7th Ave E/Century Ave N	North St. Paul FIM; Division NE is now Century Ave N

5.3 Topographic Maps

Available 24k (1:24,000 scale) or 62k (1:62,000 scale) topographic maps that intersected the Project 1007 Investigation Area were obtained from HIG for the years 1946, 1948, 1949, 1950, 1951, 1967, 1972, 1980, 1993, 2010, and 2013. Historical surface disturbances that include gravel pits, quarries, and cemeteries were identified by topographic map and year and are summarized in **Attachment A-3**. Because there are several areas of shallow karst in the Project 1007 Investigation Area, these features were identified as potential but unverified areas where surface to groundwater migration of PFAS may have been exacerbated due to the removal of surficial materials if near PFAS-impacted surface water bodies. Topographic maps are provided electronically in **Attachment A-2**.

6. Review of Other Resources

6.1 Fire Department Records

Fire Departments within the Investigation Area were contacted for any documentation of fires that used foam fire suppressants. Five municipal fire departments were identified and contacted as part of this effort, including:

- Lake Elmo Fire Department – The Fire Chief was contacted in April 2020 and indicated that they have records of fires since 2012; prior to 2012, detailed records were not kept. However, the information was not provided, and subsequent inquiries yielded no responses.
- Oakdale Fire Department – Provided a PDF spreadsheet of building fires that they responded to in the area. They also indicated the location of their Fire Training Area called the East Metro Public Safety Training Center (**Figure A-3, Area H**), which is located at 1881 Century Ave N, Maplewood, MN 55109. The training center is located outside of the 11,400-foot Investigation Area.
- Woodbury Fire Department – Fire Chief has not responded to multiple inquiries.
- North Saint Paul Fire Department - Fire Chief has not responded to multiple inquiries.
- Bayport Fire Department- Fire Chief has not responded to multiple inquiries.
- Maplewood Fire Department – Fire Chief indicated that they do not respond to fires in our Investigation Area or immediately adjacent the Investigation Area.

The Oakdale Fire Department building fires list included 344 listings and was geocoded by the address specified. However, any fire location with an incomplete address that could not be appropriately geocoded or locations that were incorrectly geocoded were omitted.

A total of 115 building fire locations were identified within the Project 1007 Investigation Area. Because these locations represent direct environmental inputs of potential PFAS-containing fire suppressants, these locations were included as Sites of Concern and are presented in **Table A-1**. The presence of a building fire awarded a Site 3 points in Step 1 of the Ranking Procedure, equivalent to a Medium to High ranking designation. Investigations of specific foam suppressant products used by each Fire Department above is beyond the scope of this Limited Phase I Inventory Assessment.

6.2 FEMA Flood Maps

The Federal Emergency Management Agency (FEMA) manages the National Flood Hazard Layer (NFHL) Viewer dataset where geospatial flood mapping data is publicly available. According to the NFHL Viewer, the flood maps were last updated in 2010. Shapefiles were obtained from the NFHL to identify FEMA flood areas within the Investigation Area. Sites within 500 feet of flood areas classified by FEMA as Special Flood Hazard Area (SFHA) Zones A, AE, or AE Floodways were identified on Table A-1 but were not included in the Site Ranking Procedure.

6.3 Community Receptors

Numerous community receptors were identified within the Project 1007 Investigation Area but were not included in the Site Ranking Procedure. Any Community Receptors within 500 feet of a Site is identified in **Table A-1**.

- Educational Facilities – Schools and libraries were identified using a publicly available GIS shapefile (<https://gisdata.mn.gov/dataset/struc-school-program-locs>). A total of 26 facilities were identified within the Investigation Area.
- Day Care Facilities –Adult and Family day care license information was identified using a publicly available database search of licenses (<http://licensinglookup.dhs.state.mn.us/>). There were no day care centers identified within the Investigation Area.

- Mental Health Facilities –Mental Health Clinic license information was identified using a publicly available database search of licenses (<http://licensinglookup.dhs.state.mn.us/>). Two mental health facilities were identified within the Investigation Area.
- Minnesota Hospital Facilities – Hospitals licensed to operate in Minnesota were identified in a GIS-ready format from (<https://gisdata.mn.gov/dataset/health-facility-hospitals>). There were no hospitals identified within the Investigation Area.

The community receptors within the Investigation Area are provided below:

- Mahtomedi Middle School
- Mahtomedi High School
- Wild branch Library
- O.H. Anderson Elementary School
- Century College – Career & Technical Center
- Mahtomedi Passages Transition Program
- 916 Mahtomedi Academy
- Church of Saint Peter
- Castel Elementary
- Lake Elmo Preschool
- Lake Elmo Elementary
- Lake Elmo Public Library
- Eagle Point Elementary
- Skyview Middle School
- Skyview Elementary School
- Oakdale Library
- Pankalo Education Center
- Oakland Junior High School
- St. Croix Montessori School
- Brookview Elementary
- Brookview Preschool

6.4 Minnesota Groundwater Contamination Atlas (MGCA)

A search of the MGCA identified two regional groundwater plumes listed under two Superfund Sites: the Baytown Groundwater Contamination plume (SR0000084) and the Lakeland Groundwater Contamination plume (SR0000145). Because of the potential for the co-mingling of PFAS with other contaminants such as TCE, both groundwater Superfund Sites were added to the list of Sites of Concern.

The Baytown Groundwater Contamination plume

The primary constituents of concern are TCE (trichloroethene) and its degradation products. The Site is within a Special Well and Boring Construction Area (SWBCA). The TCE plume is located within the Site and is approximately five miles long stretching east and southeast towards the St. Croix River for a total coverage of approximately seven square miles. The area of the TCE plume includes the source area in Lake Elmo, Baytown Township, West Lakeland Township, and the City of Bayport. TCE contaminants have been identified in four major groundwater aquifers: Quaternary unconsolidated sediments, the Prairie du Chien Aquifer, Jordan Aquifer, and the Tunnel City Group Aquifer.

The Lakeland TCE plume

The primary constituents of concern are chlorinated VOCs, including TCE and its degradation products. TCE impacts to groundwater have been identified in bedrock wells in the western, west-central, and northwestern portions of the City of Lakeland.

7. Conclusions and Recommendations

AECOM conducted a Limited Phase I Inventory Assessment of the Project 1007 Investigation Area, which was determined by identifying the greatest distance between a Project 1007 infrastructure feature and the sub-watershed drainage extent. That distance was then used to generate a perimeter that encompasses the entire Valley Branch Watershed drainage area.

The Inventory Assessment included a review of proprietary and publicly available databases and regulatory reports that were searched to identify Sites with potential risk of PFAS contamination.

AECOM ranked potential Sites of Concern within the Investigation Area with a low, medium, medium to high, or high potential for PFAS contamination using the ranking protocol established by Wood as a guide with minor modifications to develop a modified Ranking Procedure.

In total, this Inventory Assessment identified 329 potential Sites of Concern for evaluation. The Sites range in Overall Site Scores from four to 17 points with the following breakdown:

- Low Potential Risk (0 – 5 points) = 10 sites
- Medium Potential Risk (6 – 10 points) = 206 sites
- Medium to High Potential Risk (11 – 15 points) = 111 sites
- High Potential Risk (16 – 20 points) = 2 sites

The rankings are solely based on the potential for PFAS contamination at each potential Site of Concern and not on the Site location with respect to the Project 1007 conveyance system.

In addition, a review of historical Fire Insurance Maps, aerial photographs, and topographic maps identified several notable areas of past land use or modifications to the ground surface in the Investigation Area that may potentially contribute to past or current increases in surface infiltration and the possible migration of contaminants within the Project 1007 Investigation Area.

Recommendations

Although the 11,400-foot Investigation Area was determined to be a suitable area of assessment that incorporates other Sites with potential PFAS contamination risk within the Valley Branch watershed, AECOM recommends that future considerations be made to include other areas for evaluation as the scope of Project 1007 continues to expand. These areas include but are not limited to:

- Areas adjacent to the Oakdale Disposal Site to the west
- Southern (west-east trending) branch of Valley Branch Creek in Afton

Additionally, AECOM recommends the future review of the Environmental Protection Agency (EPA) Toxics Release Inventory (TRI), which now requires companies that manufacture, process, or use any of the 172 PFAS compounds listed on the TRI to report their activity to the EPA by July 1, 2021. AECOM also recommends further evaluating any High or Medium to High potential Sites of Concern for the historic use of bioventing, air sparging, or other remediation methods that involve aerobic biological or chemical oxidation. These remediation technologies have been identified as processes that may induce transformation reactions of PFAS compounds that were present during petroleum remediation efforts at a Site (McGuire *et al.*, 2014).

The conclusions contained in this Limited Phase I Inventory Assessment have been based on a draft Inventory Protocol developed by Wood and modified by AECOM to identify and rank potential Sites of Concern. This Protocol is subject to future revisions that may modify the Ranking Procedures and result in changes to the number and locations of potential Sites of Concern.

8. Standard of Care

This report has been prepared for the exclusive use of MPCA. Environmental services performed by AECOM scientists and engineers for the project have been conducted in a manner consistent with the degree of care and technical skill appropriately exercised by environmental professionals currently practicing in this area. Recommendations or opinions contained in this report represent our professional judgment and are based upon available information and currently accepted practices of Phase I ESAs. Other than this, no warranty is expressed nor is it implied. Information within this report obtained during phone calls or interviews was accepted in good faith. Information obtained through databases is limited to the accuracy of those databases.

TLC Electronics, Inc.	18 Long Lake Road	Saint Paul	Ramsey	MN	55115	Steven	Olson	Sales and Marketing Director	651-488-2933	1984	Components	Founded in 1984, TLC Electronics, Inc. is a Minnesota based value added distributor of electromechanical components. TLC has emerged as one of the premier North American suppliers with responsive service, automated equipment, knowledgeable personnel, quick turnaround, competitive pricing and quality products. TLC is registered with Perry Johnson Registers, Inc. as an ISO 9001:2008 supplier and is a recognized SA and CUL supplier. TLC Electronics prides itself on the highest levels of customer service with on time delivery and high quality products, delivered at an affordable price. In addition to standard production lead times, TLC offers our premium Quick Response Manufacturing (QRM) service for those applications that require product WHEN YOU NEED IT NOW! We specialize in electromechanical components, precision microconnects and small gauge wire processed on high speed automated equipment at prices competitive with many of our manufacturers. Our value added services include: Wire and cable prep for line gauge wire, wire and cable harnesses, solder and crimp style. Automated crimping of contacts on very short wire lengths (<0.75"); Cutting tape and reel contacts for loose piece applications; Repackaging of components in smaller kit sizes; Cutting and marking lead wires using LCD integration; Fan tray assembly; Power supply modifications; Turn-key box build.
LNQUZIC Couture Boutique	1380 Western Ave North Apt 30	Saint Paul	Ramsey	MN	55117	Hermie	Jackson	Co-Owner	651-373-1149	2015	Final goods	We are a family-owned, online business that provides you with handmade quality skincare, wellness, candles and fashion jewelry. From Our Hands To Your Heart.
United Scientific, Inc.	15 Yukon Ct	Little Canada	Ramsey	MN	55117	Curt	Morison	General Manager	651-483-1050	1967	Components	Founded in 1967, United Scientific provides precision custom manufactured parts to our customers and OEM's around the world. At United Scientific precision and absolute quality control is always job one.
Universal Signs, Inc.	1033 Thomas Ave	Saint Paul	Ramsey	MN	55104	Scott	Palmskær	General Manager	651-645-0223	1932	Both	For 75 years, Universal Signs Inc. has been helping business owners command attention and gain a competitive advantage by designing, creating and installing signs that attract potential customers. At Universal Signs Inc. we understand that your sign does more than just hang on your building or sit in your parking lot. It communicates your brand, provides direction to your storefront and helps you stand apart from your competition. We create signage that attracts your recipient, draws customers into your business and ultimately works to grow your business. Interested in how we have helped businesses like yours attract attention, call today for a free consultation.
VisaTak	1850 Grexley St South	Siblewater	Washington	MN	55582	Al	Mahak	Account Manager / Co-Owner	651-653-0400	1996	Both	VisaTak is a customer manufacturer of injection molding, production moldmaking, prototype moldmaking, and secondary operations. All services are proudly done in-house in Siblewater, Minnesota.
Watsch Crafts, Inc.	13821 Lake Dr NE	Fossil Lake	Washington	MN	55025	Billy	Watsch	Not available	651-287-9639	1974	Both	We custom build vans and trucks and specialty vehicles. We get the vehicles from GM, Ford and Ram to finish off the interior and exterior and sell what we do to dealerships all over the US. We design and assemble every Watsch vehicle on the road today.
Western Spring Manufacturing	5118 130th Street North	Hugo	Washington	MN	55038	Alex	Abbutt	General Manager	651-224-1721	1950	Components	Manufacturer of Precision Coil Springs and Wire Forms. Our products are fabricated by highly skilled technicians operating CNC equipment using a variety of certified materials. All procedures are aligned to ensure delivery of value to our customers and ultimately their customers. Our goal is to be the vendor of choice.
White Lace Cakes	1403 Helms Avenue N	Oakdale	Washington	MN	55128	Doroth	Wright	Proprietor	651-702-6500	2011	Final goods	White Lace Cakes creates elegant and delicately sophisticated custom cakes and pastries of distinction. Wedding cakes, French macarons, French pastries, tuffes and the list.
Wiloff Color Corp.	2589 N Fairview Ave.	Roseville	Ramsey	MN	55113	Mike	Staugher	District Manager	651-636-1289	1955	Both	Wiloff Color is an innovative maker of printing inks and coatings with products for tag & label, packaging, commercial, security, digital, and other markets.
WJ Haas Manufacturing Corporation	160 South Wabasha Street	Saint Paul	Ramsey	MN	55107	Suzanna	Haas	Administrator	651-224-8554	1971	Both	
Workspaces by Walldorf, Inc.	372 Geneva Ave. N	Oakdale	Washington	MN	55128	Paul	Walldorf	Owner	651-770-7277	1992	Both	Workspaces by Walldorf is owned and operated by carpenter and craftsman Paul Walldorf. Walldorf began his career as a carpenter in 1975, apprenticed under a German craftsman and artisan, and in 1990 opened P.A.W.'s Woodworking. Specializing in commercial interiors such as reception desks, display cases, museum cases and office cabinetry, every project we do is designed to our client's custom specifications.
Yardly Art	2083 Ighat Ave.	Saint Paul	Ramsey	MN	55104	Sharon	Millar-Thompson	Owner	651-644-5170	2000	Final goods	Artists made garden art and custom ornamental stonework.
ZMoore Partners LLC	PO Box 25795	Woodbury	Washington	MN	55125	Clay	Moore	President	651-900-3446	2012	Both	ZMoore Partners is a service-disabled, veteran and minority-owned manufacturer of tactical wear items for police/security, military/Special Ops, and prepared-citizen markets. We manufacture custom or 3d-printed designed tactical vests, holsters, gun cases, carrying bags, etc. that require precise industrial sewing. Small-to-mid-size batches and quality customization are our hallmarks.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

NPL:	
EPA ID:	MND980609515
Summary:	Conditions at listing (October 1981): The Oakdale Dump covers 40 acres in Oakdale, Washington County, Minnesota. The site consists of three adjoining properties that were used for the disposal of industrial wastes during the 1950s. The
EPA ID:	MND980609515
Summary:	three (named for the property owner at the time of disposal) are: Abresch (the largest), a wetland in which a number of large trenches were excavated for waste burial; Brockman, used for disposal when the water level was high at Abresch; and E
EPA ID:	MND980609515
Summary:	berle, where solvents were spilled on the ground and ignited. Many thousands of drums of waste appear to be buried on the site, plus large quantities of other solid industrial wastes. Ground water and surface water in the area are contaminated
EPA ID:	MND980609515
Summary:	with a wide variety of organic chemicals, including acetone and isopropyl ether. Status (July 1983): 3M Corp., possibly one of the waste contributors, has removed surface materials and cleaned up several children's play areas on the site.
EPA ID:	MND980609515
Summary:	3M, the State, and EPA have reached an agreement in principle under which 3M will undertake complete remedial work at the site, including treatment of ground water.

Hazardous Waste Summary:

- . Waste code: D001
- . Waste name: IGNITABLE WASTE

- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F005
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
