**Data Package Identification: DPWG72962**

**Analysis WG72595**

## 27 July 2020

**MINNESOTA POLLUTION CONTROL AGENCY**
**AQUEOUS SAMPLES** **PER- AND POLYFLUOROALKYL SUBSTANCES ANALYSIS**
**SGS AXYS METHOD: MLA-110**
**4095:** L33068-21 to -40

**Project name: P1007/60608807**
**Work order number: 3000026468**

**27 July 2020**

## NARRATIVE

This narrative describes the analysis of twenty aqueous samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UHPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received at SGS AXYS on the 13th of May, 2020. The temperature of the samples upon receipt ranged from 6.4˚C to 8.8˚C, exceeding the method recommended arrival temperature of 0-4°C. The samples were stored at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG72595; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples consisted of a procedural blank, a lab-generated reference sample known as the Ongoing Precision and Recovery (OPR) sample, a matrix spike (MS) and duplicate MS. The lab blank and OPR were prepared using Canadian Springs water as the matrix. The MS and duplicate MS were prepared using parent sample RC5-WAT-BULK-03-050420 (SGS AXYS ID: L33068-40).

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 500 mL of sample was accurately weighed, spiked with isotopically labeled quantification standards and extracted and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. After spiking each sample with labeled recovery (internal) standards, the extracts were analyzed by LC-MS/MS. Analyte concentrations were determined by isotope dilution/internal standard method, comparing the area of the quantification ion to that of the isotopically labeled standard.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard (CS1) or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L33068-XX; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS ID with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

Any extra work required and performed after the initial instrumental analysis of the sample extract was given an extra “test suffix” code. The single letter code per extra work performed was added to the SGS AXYS sample ID as a suffix, and was combined with any other applicable test suffix codes. The extra work code used to report data in this package include:

(A) = parent sample for a duplicate pair
N = dilution of the sample extract followed by instrumental analysis

The laboratory qualifiers used to report results were as follows:

J = indicates an estimated value where the concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RDL)
U = identifies a compound that was not detected
V = surrogate recovery was not within method specifications
E = exceeds calibrated linear range, see dilution data
D = dilution data
X = result reported separately

Results were reported with concentration units of nanograms per litre (ng/L). Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

The samples and QC samples were analyzed in one analysis batch and was carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, precision, laboratory procedural blank, and labeled compound recovery specifications were met with the following exceptions:

Percent recovery of labeled compound $^{13}C_4$-PFBA in several client samples was below the contract nominal limit and was flagged with a 'V'. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only.

Percent recovery of several analytes in the Matrix Spike and Matrix Spike duplicate (SGS AXYS ID: WG72595-103 and -104, respectively) were above the contract nominal limit.

**ANALYTICAL DISCUSSION**

The samples RC3-WAT-BULK-01-050420, RC5-WAT-BULK-02-050420, RC5-WAT-BULK-03-050420, the MS and MSD (SGS AXYS ID: L33068-32, -39, -40, WG72595-103 and -104, respectively) were diluted and instrumentally re-analyzed to bring the area response of some targets to within the calibrated linear range of the instrument. The affected target concentrations are reported from the diluted extract (indicated by suffix '**N**' on the SGS AXYS ID). The dilution factors are provided on the reports for the dilution analyses.

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup: DPWG72962. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 07**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products, Blood/ Serums and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue, blood/serum, AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] | Blood, Serum |
|---|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g | 2 mL |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g | ng/mL |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 0.53-2.1 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 | 0.2-0.8 |
| Perfluoroalkyl sulfonates | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Fluorotelomer sulfonates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | 40 | 0.8 |
| Perfluorooctane sulfonamides | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Perfluorooctane sulfonamide ethanols | 8 | 5.3 | 0.8 | 1.6 | 2.0 | 100 | 2.0 |
| Per- and polyfluoroether carboxylates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | N/A | 0.8 |
| Ether sulfonates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | N/A | 0.8 |

[1] Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

[2] A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

[3] A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

[4] A maximum of 2 g of tissue may be analyzed.

[5] A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS. Other AFFF products such as fluoroprotein foams may be analyzed using this method but need special

handling. See PFAS product manager for handling instructions. Consult product Safety Data Sheets (SDS) and other information before confirming. Log these samples into LIMS as a Q Product.

Refer to Appendix B for sample storage conditions.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.

**SGS AXYS Analytical Services Ltd.**

**Perfluorooctane sulfonamidoacetic acids**

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)
Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)
11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.
SGS AXYS Analytical Services Ltd, 2045 Mills Road W., Sidney, BC, Canada, V8L 5X2. Tel. (250) 655-5800, fax (250) 655-5811.
This is not a controlled document; it is subject to change without notification.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Blood, Serum sample size may be up to 2 mL. After the addition of isotopically labelled surrogate standards the sample is extracted with 50% formic acid. The resulting solution is cleaned up by solid phase extraction (SPE) on a weak anion exchange sorbent. The eluent tubes are spiked with recovery standards and then eluent collected and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentration of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where}\quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

### 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

1 Times shown are in decimal minute units.

2 Alternate transition, second m/z, may be used if necessary to avoid interference.

3 Transition ion ratios may vary by instrument, values shown are examples. Ion ratios applicable to qualitative identification are determined from instrumental calibration data.

4 Unit mass resolution of this instrument suggests ± 0.5 amu uncertainty in indicated masses.

5 If the quantifying standard $^{13}C_3$-PFBS is unavailable PFBS may optionally be quantified against $^{13}C_3$-PFHxS.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

## SGS AXYS Analytical Services Ltd.

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater.

### DoD QSM Rev. 5.3 Recovery Acceptance Limits for OPRs

| Compound | OPR Recovery Range for Aqueous Samples (%) | OPR Recovery Range for Solid Samples (%) |
|---|---|---|
| PFBA | 73-129 | 71-135 |
| PFPeA | 72-129 | 69-132 |
| PFHxA | 72-129 | 70-132 |
| PFHpA | 72-130 | 71-131 |
| PFOA | 71-133 | 69-133 |
| PFNA | 69-130 | 72-129 |
| PFDA | 71-129 | 69-133 |
| PFUnA | 69-133 | 64-136 |
| PFDoA | 72-134 | 69-135 |
| PFTrDA | 65-144 | 66-139 |
| PFTeDA | 71-132 | 69-133 |
| PFBS | 72-130 | 72-128 |
| PFPeS | 71-127 | 73-123 |
| PFHxS | 68-131 | 67-130 |
| PFHpS | 69-134 | 70-132 |
| PFOS | 65-140 | 68-136 |
| PFNS | 69-127 | 69-125 |
| PFDS | 53-142 | 59-134 |
| 4:2 FTS | 63-143 | 62-145 |
| 6:2 FTS | 64-140 | 64-140 |
| 8:2 FTS | 67-138 | 65-137 |

### QC Specifications for Aqueous, Solid, AFFF, Tissue and Blood Serum Samples: Surrogate Standard Recoveries, OPR and Samples

| Surrogate Standard | OPR and Sample Recovery Range [1] for Aqueous, Solid and AFFF Samples [3] (%) | OPR and Sample Recovery Range [1] for Tissue Samples (%) [3] | OPR and Sample Recovery Range [1] for Blood/Serum Samples (%) [3] |
|---|---|---|---|
| $^{13}C_4$-PFBA | 50-150 | 50-150 | 50-150 |
| $^{13}C_5$-PFPeA | 50-150 | 50-150 | 50-150 |
| $^{13}C_5$-PFHxA | 50-150 | 50-150 | 50-150 |
| $^{13}C_4$-PFHpA | 50-150 | 50-150 | 50-150 |
| $^{13}C_8$-PFOA | 50-150 | 50-150 | 50-150 |
| $^{13}C_9$-PFNA | 50-150 | 50-150 | 50-150 |
| $^{13}C_6$-PFDA | 50-150 | 50-180 | 50-150 |
| $^{13}C_7$-PFUnA | 50-150 | 50-150 | 50-160 |
| $^{13}C_2$-PFDoA | 50-150 | 50-150 | 50-150 |
| $^{13}C_2$-PFTeDA | 50-150 | 50-150 | 40-150 |
| | | | |
| $^{13}C_3$-PFBS | 50-150 | 50-150 | 50-150 |
| $^{13}C_3$-PFHxS | 50-150 | 50-150 | 50-150 |
| $^{13}C_8$-PFOS | 50-150 | 50-150 | 50-150 |
| | | | |
| $^{13}C_2$-4:2 FTS | 50-150 | 50-220 | 50-150 |
| $^{13}C_2$-6:2 FTS | 50-150 | 50-180 | 30-180 |
| $^{13}C_2$-8:2 FTS | 50-150 | 50-300 | 30-180 |
| | | | |
| $^{13}C_8$-PFOSA | 50-150 | 50-150 | 50-150 |
| $D_3$-N-MeFOSA | 30-150 | [2] | 50-150 |
| $D_5$-N-EtFOSA | 20-150 | [2] | 50-150 |
| | | | |
| $D_3$-N-MeFOSAA | 50-150 | [2] | 40-200 |
| $D_5$-N-EtFOSAA | 50-150 | [2] | 40-200 |
| | | | |
| $D_7$-N-MeFOSE | 30-150 | [2] | 50-150 |
| $D_9$-N-EtFOSE | 30-150 | [2] | 30-150 |
| | | | |
| $^{13}C_3$-HFPO-DA | 50-150 | 50-150 | 50-150 |

[1] Lower surrogate recoveries may be accepted based on application and professional judgment. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment.

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |

**SGS AXYS Analytical Services Ltd.**

| QC Parameter | Specification |
|---|---|
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL.<br>Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |
| Whole Blood [5] or Serum[6] | Up to 2 mL | HDPE or Glass, not polypropylene. | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90-day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies.

**SGS AXYS Analytical Services Ltd.**

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement.

[5] Whole blood must be treated with anticoagulant such as heparin or sodium citrate at time of collection.

[6] Glass vacutainers should be used for blood or serum collection. Plastic vacutainers (such as PET plastic) are not suitable as long chain PFAS compounds may be adsorbed onto the vacutainer surface.

## SGS AXYS Analytical Services Ltd.

### Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

**SAMPLE TYPES**
Sample=Routine Sample
QC-FB=Field Blank Sample
QC-FR=Field Replicate Sample
QC-TB=Trip Blank Sample
QC-EB=Equipment Blank
Treated-Mid=Treatment system sample
Treated-Post=Treatment system sample

**SAMPLING METHODS**
G=Grab sample
CT=Composite, time-paced w/AS
CF=Composite w/AS
D-T=Discrete,time-paced w/AS
D-F=Discrete,flow-paced w/AS
SW-GAS=Gas Sampling
Unknown=Unknown

**LAB MATRICES**
DW=Drinking Water
NW=Nonpotable Water
SD=Soil/Solid
AR=Air
BL=Biological Material
OT=Other
TS=Tissue

**FIELD MATRICES**
Wtr-Ground=Groundwater
Wtr-Surf=Surface Water
Wtr-Drink=Drinking Water
QC-BLANK=Artificial Blank Water
Leachate=Leachate Sample
Air-Indoor=Indoor Air
Gas-Soil=Soil Gas
Sed-Usieve - Sediment

*** WARNING: this message is from an EXTERNAL SENDER. Please be cautious, particularly with links and attachments. ***

Similarly, there are two WL12-WAT-BULK-01-050720 – the second one should be WL12-WAT-BULK-**02**-050720. Again, the bottle labels should be correct.

Sorry should be the last typo....

**Subject:** RE: [EXTERNAL] Two Coolers Shipped Last Night

Hi Dale,

4095

I just caught a typo in the COC for tracking number 392789107088. There are two WL7-WAT-BULK-01-050720 sample IDs; the second one, which is marked for the MS/MSD kit, should be WL7-WAT-BULK-03-050720. I am pretty sure the labels are correct on the physical bottles are correct. I have attached the marked up COC.

They will be correct on the supplementary chains as well, but I wanted to get this to you before a parent sample inadvertently gets spiked.

**Subject:** RE: [EXTERNAL] Two Coolers Shipped Last Night

Email 1 of 4:

Hi all,

Attached (in multiple emails for file size restriction reasons) are the shipping documents and associated COCs. The tracking numbers are:

39278910 7055
39278910 7066
39278910 7077
39278910 7088
39278910 7099
39278910 7103
39278910 7114
39278910 7125

Dale, as you and I discussed, I would like to run sample RC18A-FOAM-OLD-01-050520 as both a solids and an aqueous sample, or whatever makes sense. That sample is on the chain associated with tracking number: 392789107066.

L33098-20

**Project Name: P1007/60608807**
**Work order number: 3000025335**

**28 July 2020**

## NARRATIVE

This narrative describes the analysis of three aqueous samples for the determination of total oxidizable precursors using Ultra high-Performance Liquid Chromatography tandem mass spectrometry (UPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received at SGS AXYS on the 13th and 20th of May, 2020. The temperature of the samples upon receipt ranged from 3.3˚C to 9.5˚C, exceeding the method recommended arrival temperature of 0-4°C. The samples were stored at -20˚C in the dark prior to extraction and analysis.

## SAMPLE PREPARATION, EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG72616; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples consisted of a procedural blank, a lab-generated reference sample known as the Ongoing Precision and Recovery (OPR) sample, and a duplicate OPR. The lab blank and OPR's were prepared using Canadian Springs water as the matrix.

The sample preparation, extraction and analysis procedures followed were in accordance with SGS AXYS Method MLA-111: ***Analytical Procedure for the Analysis of Total Oxidizable Precursors (TOP) in Aqueous and Solid Matrices by LC-MS/MS.*** A method summary (MSU-111) of SGS AXYS Method MLA-111 is included with this data package.

Approximately 0.06 L was accurately weighed and spiked with isotope labeled extraction standards, an isotope labeled oxidation monitoring standard, oxidized using base and heat activated persulfate. After cooling and pH adjustment the reaction mixture was spiked with isotope labeled quantification standards, extracted and cleaned up using weak anion exchange SPE cartridge. The cartridge was eluted using basic methanol and the resulting extract was then spiked with labeled recovery (internal) standards and analyzed using a UPLC reversed phase C18 column using a solvent gradient. The column was coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) mode with negative electrospray ionization.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard (CS1) or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L330XX-XX; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS ID with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

Any extra work required and performed after the initial instrumental analysis of the sample extract was given an extra "test suffix" code. The single letter code per extra work performed was added to the SGS AXYS sample ID as a suffix, and was combined with any other applicable test suffix codes. The extra work code used to report data in this package include:

(A) = parent sample for a duplicate pair

The laboratory qualifiers used were as follows:

U = identifies a target analyte that was not detected

Results were reported with concentration units of nanograms per litre (ng/L). Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

The field and QC samples were carried intact throughout the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and cleanup.
- The Signal/Noise (S/N) ratios were measured as '0' for some compounds in the QC samples and sample data. This has been determined to be a limitation of the software and was deemed to not affect the data.
- Blank data should be evaluated against specifications using the same blank sample size as the size of the client samples.
- All CAL/VER, OPR and surrogate compound percent recovery specifications were met with the following exceptions:

The Relative Percent Difference (RPD) value of above 40% was observed for analyte PFHpS between the OPR and OPR duplicate (SGS AXYS ID: WG72616-102 and -103, respectively). Overall, there was good agreement in target analyte concentrations between the samples.

**ANALYTICAL DISCUSSION**

No analytical difficulty was encountered.

**DATA PACKAGE**

This data package has been assigned a unique identifier, DPWG73018 shown on the cover page. Included in this data package is the following documentation:

- Method Summary
- Sample 'Correlation Table'
- Sample Receiving Documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

# SUMMARY OF SGS AXYS METHOD MLA-111 REV 02 VER 03

## ANALYTICAL PROCEDURE FOR THE ANALYSIS OF TOTAL OXIDIZABLE PRECURSORS (TOP) IN AQUEOUS AND SOLID MATRICES

This document describes a method for conversion of oxidizable polyfluroroalkyl substances (PFAS) into terminal perfluorinated carboxylic acids (PFCAs) through the use of persulfate oxidation and subsequent analysis of perfluorinated carboxylates ($C_4$-$C_{14}$) and sulfonates ($C_4$-$C_{10}$, $C_{12}$). Typically samples are analyzed pre- and post-oxidation and both data sets of results are reported. The increase in concentration of the terminal carboxylic acids following oxidation represents the precursor potential of the sample. These concentration increases represent the transformation of oxidizable PFAS into PFCAs. Alternatively, a sample is analyzed only post-oxidation and the concentration of perfluorinated acids reported represents the total (actual plus potential perfluorinated acids) concentrations.

This method is applicable for the analysis of solid samples, biosolid samples and aqueous samples including ground water, surface water and aqueous samples affected by aqueous film forming foams (AFFF) applications.

Following the oxidation reaction, samples are analyzed for the following suite of perfluorinated carboxylates and sulfonates:

### Target Analytes

| A. Perfluorinated carboxylates | B. Perfluorinated sulfonates |
|---|---|
| Perfluorobutanoate (PFBA) | Perfluorobutanesulfonate (PFBS) |
| Perfluoropentanoate (PFPeA) | Perfluoropentanesulfonate (PFPeS) |
| Perfluorohexanoate (PFHxA) | Perfluorohexanesulfonate (PFHxS) |
| Perfluoroheptanoate (PFHpA) | Perfluoroheptanesulfonate (PFHpS) |
| Perfluorooctanoate (PFOA) | Perfluorooctanesulfonate (PFOS) |
| Perfluorononanoate (PFNA) | Perfluorononanesulfonate (PFNS) |
| Perfluorodecanoate (PFDA) | Perfluorodecanesulfonate (PFDS) |
| Perfluoroundecanoate (PFUnA) | Perfluorododecanesulfonate (PFDoS) |
| Perfluorododecanoate (PFDoA) | |
| Perfluorotridecanoate (PFTrDA) | |
| Perfluorotetradecanoate (PFTeDA) | |

Target analytes are determined as the total of linear and branched isomers.

Method quality control is performed on an ongoing basis from oxidation of known precursor compounds spiked into a control matrix. The loss of the precursor compounds and the formation of the oxidation products are used to determine the ongoing performance of the method.

**SGS AXYS Analytical Services Ltd.**

Typical reporting limits for the default sample sizes of 50 mL aqueous samples and 0.5 g solid samples are provided below:

| Analyte groups | Reporting Limits Aqueous Samples (ng/L) | Reporting Limits Solid Samples (ng/g) |
|---|---|---|
| Perfluorinated carboxylates $C_4$-$C_{14}$ | 6-32 | 0.6-3.2 |
| Perfluorinated sulfonates $C_4$-$C_{10}$, $C_{12}$ | 8 | 0.8 |

## 1.0 OXIDATION, EXTRACTION AND CLEANUP PROCEDURES

Samples are analyzed in pairs of pre- and post-oxidation sample aliquots. Clients may choose to analyze only post-oxidation samples.

Pre-oxidation aqueous samples (up to 50 mL) are spiked with isotope labeled quantification standards, extracted and cleaned up using weak anion exchange solid phase extraction (SPE).

Post-oxidation aqueous samples (up to 50 mL) are spiked with isotope labeled extraction standards and an isotope labeled oxidation monitoring standard, and oxidized using base and heat activated persulfate. After cooling and pH adjustment the reaction mixture is spiked with isotope labeled quantification standards and extracted and cleaned up using weak anion exchange SPE.

Solid and biosolid samples (typically 0.5 g) are spiked with isotope labeled extraction standards and an isotope labeled reaction monitoring standard, and extracted by mixing and sonicating with methanolic ammonium hydroxide. The extract is treated with carbon and split into two equal portions, one for pre-oxidation analysis and the other for post-oxidation analysis. The pre-oxidation portion is spiked with isotope labeled quantification standards, extracted and cleaned up using weak anion exchange solid phase extraction (SPE). The post-oxidation portion is oxidized using base and heat activated persulfate. After cooling and pH adjustment the reaction mixture is spiked with isotope labeled quantification standards and extracted and cleaned up using weak anion exchange SPE.

## 2.0 INSTRUMENTATION

Analysis of the pre- and post-oxidation sample extracts are performed on a high performance or ultrahigh performance liquid chromatography reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) mode with negative electrospray ionization.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of six or more calibration solutions containing the analytes. A mid-level calibration standard is analyzed to verify the initial calibration and injected every 12 hours.

## 4.0 QUANTIFICATION PROCEDURES

### Analyte Quantification

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the quantification ion to that of the $^{13}C$-labeled labeled standard and correcting for response factors. Linear quantification equations are determined from a multi-point calibration series with 1/X weighting fit and expressed as below:

$$Y = \text{slope} \times X + \text{intercept}$$

where: $$Y = \text{response ratio} = \left( \frac{\text{area of Target}}{\text{area of Surr}} \times \text{weight of Surr (ng)} \right)$$ , and

$X$ = weight of target (ng)

The slope and intercept are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Sample Conc.} = \left( \frac{\text{area of Target}}{\text{area of Surr}} \times \text{weight of Surr (ng)} - \text{intercept} \right) \times \left( \frac{1}{\text{slope}} \right) \times \left( \frac{1}{\text{sample size (L or g)}} \right)$$

where Surr is the surrogate standard

The recovery of the surrogate standards is calculated **(by internal standard quantification against the recovery standards using an average RRF)** and monitored as an indication of overall data quality. Final target concentrations are recovery corrected by this method of quantification. Surrogate standard recovery is calculated as:

$$\%\,\text{surrogate recovery} = \left( \frac{\text{area of Surr}}{\text{area of Rec}} \right) \times \left( \frac{\text{weight of Rec}}{\text{weight of Surr}} \right) \times \frac{100}{\text{RRF}_S}$$ , in the sample

*where* Rec = the recovery standard used, and

$$\text{RRF}_S = \left( \frac{\text{area of Surr}}{\text{area of Rec}} \right) \times \left( \frac{\text{weight of Rec}}{\text{weight of Surr}} \right)$$ ; from the calibration.

## 5.0 QUALITY ACCEPTANCE CRITERIA

All samples are analyzed in batches. A batch consists of both pre-oxidation and post-oxidation sample pairs. Clients may choose to analyze only post oxidation samples. Each batch has the following composition: One procedural blank and one Ongoing Precision and Recovery (OPR) quality control (QC) sample. An OPR is prepared by adding an aliquot of native standard containing model precursor compounds and terminal acids (containing $C_4$-$C_{14}$ carboxylates and $C_4$-$C_{11}$ and $C_{12}$ sulfonates) to a clean sample matrix. During the oxidation procedure the model precursors in the OPR react to form terminal perfluorinated acids. Recovery values of the perfluorinated acids spiked plus the predicted reaction products are determined to quantify recovery and used as indication of overall method performance; see the tables below for acceptance ranges. A duplicate client sample is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria tabulated below.

## QC Specifications: Procedural Blank Levels and OPR Recovery Ranges (Pre- and Post-Oxidation)

| Compound | Procedural Blank Level (ng/sample) | Aqueous OPR Recovery Range [1] (%) | Solid OPR Recovery Range [1] (%) |
|---|---|---|---|
| PFBA | ≤ 1.6 | 50-150 | 50-150 |
| PFPeA | ≤ 0.8 | 50-150 | 50-150 |
| PFHxA | ≤ 0.4 | 50-150 | 50-150 |
| PFHpA | ≤ 0.4 | 50-150 | 50-150 |
| PFOA | ≤ 0.4 | 50-150 | 50-150 |
| PFNA | ≤ 0.4 | 50-150 | 50-150 |
| PFDA | ≤ 0.4 | 50-150 | 50-150 |
| PFUnA | ≤ 0.4 | 50-150 | 50-150 |
| PFDoA | ≤ 0.4 | 50-150 | 50-150 |
| PFTrDA | ≤ 0.4 | 50-150 | 50-150 |
| PFTeDA | ≤ 0.4 | 50-150 | 50-150 |
| PFBS | ≤ 0.4 | 70-130 | 50-150 |
| PFPeS | ≤ 0.4 | 60-140 | 50-150 |
| PFHxS | ≤ 0.4 | 70-130 | 50-150 |
| PFHpS | ≤ 0.4 | 60-140 | 50-150 |
| PFOS | ≤ 0.4 | 60-140 | 50-150 |
| PFNS | ≤ 0.4 | 60-140 | 50-150 |
| PFDS | ≤ 0.4 | 60-140 | 50-150 |
| PFDoS | ≤ 0.4 | 40-150 | 40-150 |

[1] Marginal exceedance allowance – results for one compound may fall outside of the above limits by a maximum of 10% of the value.

The efficiency of the oxidation is measured on a batch level using both recovery and extent of disappearance of the following compounds in the OPR. Sample-to-sample measures of oxidation include the extent of oxidation (disappearance of labeled $^{13}C_8$-PFOSA).

## QC Specifications: Other Parameters

| QC Parameter | Specification |
|---|---|
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for all analytes for lowest calibration standard. |
| Initial Calibration (native compounds) | Run initially, and as required to maintain calibration verification and instrument sensitivity.<br>(1/x) weighted linear fit, exclude origin.<br>Calculated conc. 70-130 % of actual $R^2 > 0.990$.<br>Surrogate recoveries must fall within 50-150%. |
| Continuing Calibration Verification (native compounds) | Every 12 hours, quantify against I-CAL.<br>Calculated conc. 70-130% of actual.<br>Surrogate recoveries must fall within 50-150%. |
| Instrumental Carryover and Instrument Background | Every Initial Calibration, Cal/Ver, or SPM: ≤ 0.3 % carryover and area response of analytes in instrument blank ≤ 800. |
| Duplicate Samples or MS/MSD | If conc. > 5 times R.L., RPD ≤ 40%<br>If conc. ≤ 5 times R.L., difference between pairs ≤ R.L. |

## NARRATIVE

This narrative describes the analysis of twenty aqueous samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UHPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received at SGS AXYS on the 20th of May, 2020. The temperature of the samples upon receipt ranged from 9.3˚C to 9.5˚C, exceeding the method recommended arrival temperature of 0-4°C. The samples were stored at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG72614; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples consisted of a procedural blank, a lab-generated reference sample known as the Ongoing Precision and Recovery (OPR) sample, and a duplicate OPR. The lab blank and OPR's were prepared using Canadian Springs water as the matrix.

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 500 mL of sample was accurately weighed, spiked with isotopically labeled quantification standards and extracted and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. After spiking each sample with labeled recovery (internal) standards, the extracts were analyzed by LC-MS/MS. Analyte concentrations were determined by isotope dilution/internal standard method, comparing the area of the quantification ion to that of the isotopically labeled standard.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard (CS1) or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L33098-XX; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS ID with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

Any extra work required and performed after the initial instrumental analysis of the sample extract was given an extra "test suffix" code. The single letter code per extra work performed was added to the SGS AXYS sample ID as a suffix, and was combined with any other applicable test suffix codes. The extra work code used to report data in this package include:

(A) = parent sample for a duplicate pair
N = dilution of the sample extract followed by instrumental analysis

The laboratory qualifiers used to report results were as follows:

J = indicates an estimated value where the concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RDL)
U = identifies a compound that was not detected
V = surrogate recovery was not within method specifications
E = exceeds calibrated linear range, see dilution data
D = dilution data
X = result reported separately
H = concentration is estimated
B = analyte found in the blank
N = authentic recovery in the OPR is not within contract control limits

Results were reported with concentration units of nanograms per litre (ng/L). Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

The samples and QC samples were analyzed in one analysis batch and was carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, precision, laboratory procedural blank, and labeled compound recovery specifications were met with the following exceptions:

The analyte PFOSA was detected in the Lab Blank (SGS AXYS ID: WG72614-101). Data are not blank corrected. Blank data should be taken into consideration when evaluating sample data.

Percent recovery of analytes ADONA and 9Cl-PF3ONS in the OPR (SGS AXYS ID: WG72614-102) were above the contract nominal limit and were flagged with an ‘N’. Sample data may be similarly affected.

The Relative Percent Difference (RPD) value of above 20% was observed for analyte HFPO-DA between the OPR and OPR duplicate (SGS AXYS ID: WG72614-102 and -103, respectively). Overall, there was good agreement in target analyte concentrations between the samples.

Percent recovery of analytes 9Cl-PF3ONS and 11Cl-PF3OUdS in the continuing calibration (data filename: FC0L_212 S: 69) were above the contract nominal limit.

Percent recovery of several labeled compounds in several client samples were below the contract nominal limit and were flagged with a ‘V’. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only. Where the percent recovery for a labeled compound fell below 10% and half of the method lower control limits but above 1% the native analyte with the labeled compound being its exact labeled analogue was reported in a ‘concentration is estimated’ capacity and flagged with an 'H’.

**ANALYTICAL DISCUSSION**

The samples RC22-WAT-BULK-01-051420 and RC12-WAT-BULK-01-051820 (SGS AXYS ID: L33098-6, and -14, respectively) were diluted and instrumentally re-analyzed to bring the area response of some targets to within the calibrated linear range of the instrument. The affected target concentrations are reported from the diluted extract (indicated by suffix ‘**N**’ on the SGS AXYS ID). The dilution factors are provided on the reports for the dilution analyses.

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup: DPWG73031. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 07**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products, Blood/ Serums and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue, blood/serum, AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] | Blood, Serum |
|---|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g | 2 mL |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g | ng/mL |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 0.53-2.1 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 | 0.2-0.8 |
| Perfluoroalkyl sulfonates | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Fluorotelomer sulfonates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | 40 | 0.8 |
| Perfluorooctane sulfonamides | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Perfluorooctane sulfonamide ethanols | 8 | 5.3 | 0.8 | 1.6 | 2.0 | 100 | 2.0 |
| Per- and polyfluoroether carboxylates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | N/A | 0.8 |
| Ether sulfonates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | N/A | 0.8 |

[1] Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

[2] A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

[3] A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

[4] A maximum of 2 g of tissue may be analyzed.

[5] A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS. Other AFFF products such as fluoroprotein foams may be analyzed using this method but need special

handling. See PFAS product manager for handling instructions. Consult product Safety Data Sheets (SDS) and other information before confirming. Log these samples into LIMS as a Q Product.

Refer to Appendix B for sample storage conditions.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.

**Perfluorooctane sulfonamidoacetic acids**

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)
Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)
11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.
SGS AXYS Analytical Services Ltd, 2045 Mills Road W., Sidney, BC, Canada, V8L 5X2. Tel. (250) 655-5800, fax (250) 655-5811.
This is not a controlled document; it is subject to change without notification.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Blood, Serum sample size may be up to 2 mL. After the addition of isotopically labelled surrogate standards the sample is extracted with 50% formic acid. The resulting solution is cleaned up by solid phase extraction (SPE) on a weak anion exchange sorbent. The eluent tubes are spiked with recovery standards and then eluent collected and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

**Nominal Concentrations of Calibration Solutions (ng/mL)**

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentrat ion of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where}\quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

## 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

1 Times shown are in decimal minute units.
2 Alternate transition, second m/z, may be used if necessary to avoid interference.
3 Transition ion ratios may vary by instrument, values shown are examples. Ion ratios applicable to qualitative identification are determined from instrumental calibration data.
4 Unit mass resolution of this instrument suggests ± 0.5 amu uncertainty in indicated masses.
5 If the quantifying standard $^{13}C_3$-PFBS is unavailable PFBS may optionally be quantified against $^{13}C_3$-PFHxS.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater.

### DoD QSM Rev. 5.3 Recovery Acceptance Limits for OPRs

| Compound | OPR Recovery Range for Aqueous Samples (%) | OPR Recovery Range for Solid Samples (%) |

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |

| QC Parameter | Specification |
|---|---|
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL.<br>Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |
| Whole Blood [5] or Serum[6] | Up to 2 mL | HDPE or Glass, not polypropylene. | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90-day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies.

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.

This is not a controlled document; it is subject to change without notification.

**SGS AXYS Analytical Services Ltd.**

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement.

[5] Whole blood must be treated with anticoagulant such as heparin or sodium citrate at time of collection.

[6] Glass vacutainers should be used for blood or serum collection. Plastic vacutainers (such as PET plastic) are not suitable as long chain PFAS compounds may be adsorbed onto the vacutainer surface.

## Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

(1) Where applicable, custom lab flags have been used on this report; U = not detected at RL; B = analyte found in the associated blank and concentration in sample is less than 10X the concentration in the associated blank.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = minimum reporting level.

These data are validated and reported as accurate and in accord with SGS AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

# PERFLUORINATED ORGANIC & FTS ANALYSIS

## AQUEOUS SAMPLES

### PROJECT NAME: P1007/60608807

### WORK ORDER #: 3000025335

**Contract: 4095**
**Data Package Identification: DPWG73047**

**Analysis WG72779**

## 28 July 2020

**MINNESOTA POLLUTION CONTROL AGENCY**
**AQUEOUS SAMPLES** **PER- AND POLYFLUOROALKYL SUBSTANCES ANALYSIS**
**SGS AXYS METHOD: MLA-110**

**4095:** L33068-1 to -4 and -6 to 20

**Project name: P1007/60608807**
**Work order number: 3000025335**

**28 July 2020**

## NARRATIVE

This narrative describes the analysis of nineteen aqueous samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UHPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received at SGS AXYS on the 13th of May, 2020. The temperature of the samples upon receipt ranged from 3.3˚C to 8.8˚C, exceeding the method recommended sample storage temperature of 0-4°C for some samples. The samples were all stored at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG72779; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples consisted of laboratory procedural blank, a laboratory generated reference sample referred to as an Ongoing Precision and Recovery (OPR) sample and duplicate OPR sample. The laboratory procedural blank, OPR and duplicate OPR samples were all prepared using Canadian Springs water as the matrix.

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 500 mL of each sample was accurately weighed, spiked with isotopically labeled quantification standards and extracted and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. After spiking each sample with labeled recovery (internal) standards, the extracts were analyzed by LC-MS/MS. Analyte concentrations were determined by isotope dilution/internal standard method, comparing the area of the quantification ion to that of the isotopically labeled standard.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard (CS1) or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L33068-XX; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS ID with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

Any extra work required and performed after the initial instrumental analysis of the sample extract was given an extra “test suffix” code. The single letter code per extra work performed was added to the SGS AXYS sample ID as a suffix and combined with any other applicable test suffix codes. The extra work code used to report data in this package include:

(A) = parent sample for a duplicate pair
N = dilution of the sample extract followed by instrumental analysis
R = repeat analysis using a fresh aliquot of the same sample

The laboratory qualifiers used to report results were as follows:

D = dilution data
E = exceeds calibrated linear range, see dilution data
H = concentration is estimated (information only value)
J = indicates an estimated value where the concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RDL)
U = identifies a compound that was not detected
V = surrogate recovery was not within method specifications
X = result reported separately

Results were reported with concentration units of nanograms per litre (ng/L). Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

The samples and QC samples were analyzed in one analysis batch and carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, precision, laboratory procedural blank, and labeled compound recovery specifications were met with the following exceptions:

For some field samples, the percent recovery for the surrogate compound 13C4-PFBA was below 10% and less than half the lower SGS AXYS method criteria limit. The results for the related target analyte PFBA were flagged with an 'H' and reported for information only.

For some samples, the percent recoveries for some surrogate compounds were below both the client specific and SGS AXYS method criteria limit (50%) and were flagged with a 'V'. As the isotope dilution method of quantification produces data that is recovery corrected, these variances from method criteria were deemed to not affect the quantification of the target analytes. Percent surrogate recoveries are used as general method performance indicator only.

**ANALYTICAL DISCUSSION**

For some field samples, the results from the initial analysis for some target analytes were inconsistent and deemed unreliable when the original and diluted extract data was compared. As remedial action, all field samples from the initial analysis batch were scheduled for a repeat analysis. The final results for all field samples were reported from the repeat analysis data (indicated with the suffix 'R' following the SGS AXYS ID added).

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup: DPWG73047. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'

- Sample receiving documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 07**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products, Blood/ Serums and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue, blood/serum, AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] | Blood, Serum |
|---|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g | 2 mL |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g | ng/mL |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 0.53-2.1 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 | 0.2-0.8 |
| Perfluoroalkyl sulfonates | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Fluorotelomer sulfonates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | 40 | 0.8 |
| Perfluorooctane sulfonamides | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 0.53 | 0.08 | 0.16 | 0.2 | 10 | 0.2 |
| Perfluorooctane sulfonamide ethanols | 8 | 5.3 | 0.8 | 1.6 | 2.0 | 100 | 2.0 |
| Per- and polyfluoroether carboxylates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | N/A | 0.8 |
| Ether sulfonates | 3.2 | 2.1 | 0.32 | 0.64 | 0.8 | N/A | 0.8 |

[1] Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

[2] A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

[3] A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

[4] A maximum of 2 g of tissue may be analyzed.

[5] A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS. Other AFFF products such as fluoroprotein foams may be analyzed using this method but need special

handling. See PFAS product manager for handling instructions. Consult product Safety Data Sheets (SDS) and other information before confirming. Log these samples into LIMS as a Q Product.

Refer to Appendix B for sample storage conditions.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.

**Perfluorooctane sulfonamidoacetic acids**

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)
Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)
11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

SGS AXYS Analytical Services Ltd, 2045 Mills Road W., Sidney, BC, Canada, V8L 5X2. Tel. (250) 655-5800, fax (250) 655-5811.
This is not a controlled document; it is subject to change without notification.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Blood, Serum sample size may be up to 2 mL. After the addition of isotopically labelled surrogate standards the sample is extracted with 50% formic acid. The resulting solution is cleaned up by solid phase extraction (SPE) on a weak anion exchange sorbent. The eluent tubes are spiked with recovery standards and then eluent collected and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentrat ion of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where}\quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

### 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

1 Times shown are in decimal minute units.

2 Alternate transition, second m/z, may be used if necessary to avoid interference.

3 Transition ion ratios may vary by instrument, values shown are examples. Ion ratios applicable to qualitative identification are determined from instrumental calibration data.

4 Unit mass resolution of this instrument suggests ± 0.5 amu uncertainty in indicated masses.

5 If the quantifying standard $^{13}C_3$-PFBS is unavailable PFBS may optionally be quantified against $^{13}C_3$-PFHxS.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater.

### DoD QSM Rev. 5.3 Recovery Acceptance Limits for OPRs

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |

**SGS AXYS Analytical Services Ltd.**

| QC Parameter | Specification |
|---|---|
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL.<br>Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |
| Whole Blood [5] or Serum[6] | Up to 2 mL | HDPE or Glass, not polypropylene. | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90-day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies.

This document is the Intellectual Property of SGS AXYS Analytical Services Ltd. and contains Proprietary and Confidential Business Information. It may not be reproduced or distributed without written permission of the owner. © SGS AXYS Analytical Services Ltd, 2020.
SGS AXYS Analytical Services Ltd, 2045 Mills Road W., Sidney, BC, Canada, V8L 5X2. Tel. (250) 655-5800, fax (250) 655-5811.
This is not a controlled document; it is subject to change without notification.

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement.

[5] Whole blood must be treated with anticoagulant such as heparin or sodium citrate at time of collection.

[6] Glass vacutainers should be used for blood or serum collection. Plastic vacutainers (such as PET plastic) are not suitable as long chain PFAS compounds may be adsorbed onto the vacutainer surface.
