**Contract: 4095**
**Data Package Identification: DPWG71538**

**Analysis WG71043**

## 18 February 2020

**MINNESOTA POLLUTION CONTROL AGENCY**
**SOLID SAMPLES**

**PER- AND POLYFLUOROALKYL SUBSTANCES ANALYSIS**
**SGS AXYS METHOD: MLA-110**
**4095:** L32482-1 to -15

**Project name: P1007/60608807**
**Work order number: 3000025335**

**18 February 2020**

## NARRATIVE

This narrative describes the analysis of fifteen solid samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received at SGS AXYS on the 18th of December, 2019. The temperature of the samples upon receipt was 4.5°C, marginally exceeding the method recommend sample arrival temperature requirement (<4°C). The samples were stored frozen at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG71043; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples for the analysis batch consisted of a laboratory procedural blank sample, a laboratory-generated reference sample referred to as an Ongoing Precision and Recovery (OPR) sample, a matrix spike sample, and a duplicate of the matrix spike sample. The laboratory procedural blank and OPR samples were prepared using a reference solid as the matrix. Sample MW4A-soil-74-75-03-121319 (SGS AXYS ID: L32482-11) was used to make the MS/MSD samples.

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 5 grams of each sample was accurately weighed. After addition of isotopically labelled surrogate standards, the sample was extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants were combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution was diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate was spiked with recovery standards and analyzed by LCMS/MS.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard CS1 or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L32482-X; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS IDs with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

The laboratory qualifiers used to report results were as follows:

J = concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RL)
V = surrogate percent recovery was not within method/contract control limits
U = identifies a target analyte that was not detected

Results were reported with concentration units of nanograms per gram (ng/g) on dry weight basis. Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

QC samples were prepared alongside the field samples and carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, laboratory procedural blank, precision and labeled compound recovery specifications were met with the following exceptions:

In the continuing calibration verifications (FC0L_022 S:32), the surrogate compound 13C 8:2 FTS was observed above the method control limit. As the native analyte 8:2 FTS was observed within method specifications, this is deemed not to have any effect on the data.

Percent recoveries of several surrogates in the client samples were observed to be outside the method limits and these surrogates have been flagged with a 'V' on the report forms. As the isotope dilution method of quantification produces data that are recovery corrected, the slight variance from the method acceptance criteria is deemed not to affect the quantification of these analytes. Percent surrogate recoveries are used as a general method performance indicator only.

**ANALYTICAL DISCUSSION**

No analytical difficulties were encountered.

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup, DPWG71538. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 06**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue and AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] |
|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 530-2100 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 |
| Perfluoroalkyl sulfonates | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Fluorotelomer sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | 40 |
| Perfluorooctane sulfonamides | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamide ethanols | 8 | 5300 | 0.8 | 1.6 | 2.0 | 100 |
| Per- and polyfluoroether carboxylates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |
| Ether sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |

1 Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

2 A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

3 A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

4 A maximum of 2 g of tissue may be analyzed.

5 A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. Other AFFF products such as fluoroprotein foams maybe be analyzed using this method, but need special handling. Consult product Safety Data Sheets (SDS) and other information before confirming. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

### Perfluorooctane sulfonamidoacetic acids

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

**SGS AXYS Analytical Services Ltd.**

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)

Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)

11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction

This is not a controlled document; it is subject to change without notification.

(SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentration of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where} \quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

## 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Procedural Blank Levels and OPR Recovery Ranges

| Compound | Procedural Blank Level (ng/sample) | OPR Recovery Range for Aqueous, Solid and AFFF Samples (%) | OPR Recovery Range for Tissue Samples (%) |
|---|---|---|---|
| PFBA | ≤ 1.6 | 70-130 | 70-130 |
| PFPeA | ≤ 0.8 | 70-130 | 70-130 |
| PFHxA | ≤ 0.4 | 70-130 | 70-130 |
| PFHpA | ≤ 0.4 | 70-130 | 70-130 |
| PFOA | ≤ 0.4 | 70-130 | 70-130 |
| PFNA | ≤ 0.4 | 70-130 | 70-130 |
| PFDA | ≤ 0.4 | 70-130 | 60-130 |
| PFUnA | ≤ 0.4 | 70-130 | 70-140 |
| PFDoA | ≤ 0.4 | 70-130 | 70-130 |
| PFTrDA | ≤ 0.4 | 70-130 | 70-130 |
| PFTeDA | ≤ 0.4 | 70-130 | 70-130 |
| PFBS | ≤ 0.4 | 70-130 | 60-130 |
| PFPeS | ≤ 0.4 | 70-130 | 70-130 |
| PFHxS | ≤ 0.4 | 70-130 | 70-130 |
| PFHpS | ≤ 0.4 | 70-130 | 70-130 |
| PFOS | ≤ 0.4 | 70-130 | 70-140 |
| PFNS | ≤ 0.4 | 70-130 | 60-150 |
| PFDS | ≤ 0.4 | 70-130 | 40-150 |
| PFDoS | ≤ 0.4 | 60-130 | 70-140 |
| 4:2 FTS | ≤ 1.6 | 70-130 | 40-150 |
| 6:2 FTS | ≤ 5 | 70-130 | 70-130 |
| 8:2 FTS | ≤ 1.6 | 70-130 | 70-170 |
| PFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSA | ≤ 0.4 | 70-130 | 50-140 |
| N-EtFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-EtFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-MeFOSE | ≤ 4 | 70-130 | 70-150 |
| N-EtFOSE | ≤ 4 | 70-130 | 70-130 |
| HFPO-DA | ≤ 1.6 | 70-130 | 70-130 |
| ADONA | ≤ 1.6 | 70-130 | 70-130 |
| 9Cl-PF3ONS | ≤1.6 | 70-130 | 70-130 |
| 11Cl-PF3OUdS | ≤ 1.6 | 70-130 | 60-130 |

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Surrogate Standard Recoveries, OPR and Samples

| Surrogate Standard | OPR and Sample Recovery Range [1] for Aqueous, Solid And AFFF Samples [3] (%) | OPR and Sample Recovery Range [1] for Tissue Samples (%) [3] |
|---|---|---|
| $^{13}C_4$-PFBA | 50-150 | 50-150 |
| $^{13}C_5$-PFPeA | 50-150 | 50-150 |
| $^{13}C_5$-PFHxA | 50-150 | 50-150 |
| $^{13}C_4$-PFHpA | 50-150 | 50-150 |
| $^{13}C_8$-PFOA | 50-150 | 50-150 |
| $^{13}C_9$-PFNA | 50-150 | 50-150 |
| $^{13}C_6$-PFDA | 50-150 | 50-180 |
| $^{13}C_7$-PFUnA | 50-150 | 50-150 |
| $^{13}C_2$-PFDoA | 50-150 | 50-150 |
| $^{13}C_2$-PFTeDA | 50-150 | 50-150 |
| | | |
| $^{13}C_3$-PFBS | 50-150 | 50-150 |
| $^{13}C_3$-PFHxS | 50-150 | 50-150 |
| $^{13}C_8$-PFOS | 50-150 | 50-150 |
| | | |
| $^{13}C_2$-4:2 FTS | 50-150 | 50-220 |
| $^{13}C_2$-6:2 FTS | 50-150 | 50-180 |
| $^{13}C_2$-8:2 FTS | 50-150 | 50-300 |
| | | |
| $^{13}C_8$-PFOSA | 50-150 | 50-150 |
| $D_3$-N-MeFOSA | 30-150 | [2] |
| $D_5$-N-EtFOSA | 20-150 | [2] |
| | | |
| $D_3$-N-MeFOSAA | 50-150 | [2] |
| $D_5$-N-EtFOSAA | 50-150 | [2] |
| | | |
| $D_7$-N-MeFOSE | 30-150 | [2] |
| $D_9$-N-EtFOSE | 30-150 | [2] |
| | | |
| $^{13}C_3$-HFPO-DA | 50-150 | 50-150 |

[1] Lower surrogate recoveries may be accepted based on application and professional judgment. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment.

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

### QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL. |

**SGS AXYS Analytical Services Ltd.**

| QC Parameter | Specification |
|---|---|
| | Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90 day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies. For aqueous samples under DoD accreditation, the sample hold time is ≤14 days.

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement. For samples under DoD accreditation the extract hold time is ≤28 days with storage at room temperature.

## Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

# PERFLUORINATED ORGANIC & FTS ANALYSIS

## SOLID SAMPLES

### PROJECT NAME: P1007/60608807

### WORK ORDER #: 3000025335

**Contract: 4095**
**Data Package Identification: DPWG71538**

**Analysis WG71043**

## 18 February 2020

**MINNESOTA POLLUTION CONTROL AGENCY**
**SOLID SAMPLES**

**PER- AND POLYFLUOROALKYL SUBSTANCES ANALYSIS**
**SGS AXYS METHOD: MLA-110**
**4095:** L32482-1 to -15

**Project name: P1007/60608807**
**Work order number: 3000025335**

**18 February 2020**

## NARRATIVE

This narrative describes the analysis of fifteen solid samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received at SGS AXYS on the 18th of December, 2019. The temperature of the samples upon receipt was 4.5°C, marginally exceeding the method recommend sample arrival temperature requirement (<4°C). The samples were stored frozen at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG71043; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples for the analysis batch consisted of a laboratory procedural blank sample, a laboratory-generated reference sample referred to as an Ongoing Precision and Recovery (OPR) sample, a matrix spike sample, and a duplicate of the matrix spike sample. The laboratory procedural blank and OPR samples were prepared using a reference solid as the matrix. Sample MW4A-soil-74-75-03-121319 (SGS AXYS ID: L32482-11) was used to make the MS/MSD samples.

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 5 grams of each sample was accurately weighed. After addition of isotopically labelled surrogate standards, the sample was extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants were combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution was diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate was spiked with recovery standards and analyzed by LCMS/MS.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard CS1 or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L32482-X; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS IDs with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

The laboratory qualifiers used to report results were as follows:

J = concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RL)
V = surrogate percent recovery was not within method/contract control limits
U = identifies a target analyte that was not detected

Results were reported with concentration units of nanograms per gram (ng/g) on dry weight basis. Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

QC samples were prepared alongside the field samples and carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, laboratory procedural blank, precision and labeled compound recovery specifications were met with the following exceptions:

In the continuing calibration verifications (FC0L_022 S:32), the surrogate compound 13C 8:2 FTS was observed above the method control limit. As the native analyte 8:2 FTS was observed within method specifications, this is deemed not to have any effect on the data.

Percent recoveries of several surrogates in the client samples were observed to be outside the method limits and these surrogates have been flagged with a 'V' on the report forms. As the isotope dilution method of quantification produces data that are recovery corrected, the slight variance from the method acceptance criteria is deemed not to affect the quantification of these analytes. Percent surrogate recoveries are used as a general method performance indicator only.

**ANALYTICAL DISCUSSION**

No analytical difficulties were encountered.

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup, DPWG71538. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 06**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue and AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] |
|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 530-2100 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 |
| Perfluoroalkyl sulfonates | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Fluorotelomer sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | 40 |
| Perfluorooctane sulfonamides | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamide ethanols | 8 | 5300 | 0.8 | 1.6 | 2.0 | 100 |
| Per- and polyfluoroether carboxylates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |
| Ether sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |

1 Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

2 A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

3 A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

4 A maximum of 2 g of tissue may be analyzed.

5 A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. Other AFFF products such as fluoroprotein foams maybe be analyzed using this method, but need special handling. Consult product Safety Data Sheets (SDS) and other information before confirming. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

### Perfluorooctane sulfonamidoacetic acids

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

**SGS AXYS Analytical Services Ltd.**

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)

Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)

11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction

This is not a controlled document; it is subject to change without notification.

(SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentration of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where} \quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

## 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Surrogate Standard Recoveries, OPR and Samples

| Surrogate Standard | OPR and Sample Recovery Range [1] for Aqueous, Solid And AFFF Samples [3] (%) | OPR and Sample Recovery Range [1] for Tissue Samples (%) [3] |
|---|---|---|
| $^{13}C_4$-PFBA | 50-150 | 50-150 |
| $^{13}C_5$-PFPeA | 50-150 | 50-150 |
| $^{13}C_5$-PFHxA | 50-150 | 50-150 |
| $^{13}C_4$-PFHpA | 50-150 | 50-150 |
| $^{13}C_8$-PFOA | 50-150 | 50-150 |
| $^{13}C_9$-PFNA | 50-150 | 50-150 |
| $^{13}C_6$-PFDA | 50-150 | 50-180 |
| $^{13}C_7$-PFUnA | 50-150 | 50-150 |
| $^{13}C_2$-PFDoA | 50-150 | 50-150 |
| $^{13}C_2$-PFTeDA | 50-150 | 50-150 |
| | | |
| $^{13}C_3$-PFBS | 50-150 | 50-150 |
| $^{13}C_3$-PFHxS | 50-150 | 50-150 |
| $^{13}C_8$-PFOS | 50-150 | 50-150 |
| | | |
| $^{13}C_2$-4:2 FTS | 50-150 | 50-220 |
| $^{13}C_2$-6:2 FTS | 50-150 | 50-180 |
| $^{13}C_2$-8:2 FTS | 50-150 | 50-300 |
| | | |
| $^{13}C_8$-PFOSA | 50-150 | 50-150 |
| $D_3$-N-MeFOSA | 30-150 | [2] |
| $D_5$-N-EtFOSA | 20-150 | [2] |
| | | |
| $D_3$-N-MeFOSAA | 50-150 | [2] |
| $D_5$-N-EtFOSAA | 50-150 | [2] |
| | | |
| $D_7$-N-MeFOSE | 30-150 | [2] |
| $D_9$-N-EtFOSE | 30-150 | [2] |
| | | |
| $^{13}C_3$-HFPO-DA | 50-150 | 50-150 |

[1] Lower surrogate recoveries may be accepted based on application and professional judgment. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment.

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## SGS AXYS Analytical Services Ltd.

### QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL. |

**SGS AXYS Analytical Services Ltd.**

| QC Parameter | Specification |
|---|---|
| | Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90 day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies. For aqueous samples under DoD accreditation, the sample hold time is ≤14 days.

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement. For samples under DoD accreditation the extract hold time is ≤28 days with storage at room temperature.

## Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

**3 Shipment Information**

☐ For EU Only: Tick here if goods are not in free circulation and provide C.I.

Total Packages (Shipper's Load and Count/SLAC) 1 Total Weight 39 ☒ lbs. ☐ kg DIM 20 / 14 / 13 ☐ in. ☐ cm

| Commodity Description | Harmonized Code | Country of Manufacture | Value for Customs |
|---|---|---|---|
| | | | $800.00 |
| | | | |
| | | | |

Has EEI been filed in AES? *For U.S. Export Only: Check One*
☐ No EEI required, value $2,500 or less per Sch. B Number, no license required (NLR), not subject to ITAR.
☐ No EEI required, enter exemption number: If other than NLR, enter License Exception:
☐ Yes – Enter AES proof of filing citation:

Total Declared Value for Carriage 60.00

Total Value for Customs (Specify Currency) 60.00

**4 Express Package Service**

*Packages up to 150 lbs. / 68 kg* — For packages over 150 lbs. (68 kg), use the FedEx Expanded Service Intl. Air Waybill.

1 ☐ FedEx Intl. Priority
6 ☐ FedEx Intl. First — Available to select locations.
☐ ___ 3 ☐ FedEx Intl. Economy — FedEx Envelope and FedEx Pak rate not available.

**5 Packaging**

*These unique brown boxes with special pricing are provided by FedEx for FedEx Intl. Priority only.

6 ☐ FedEx Envelope 2 ☐ FedEx Pak 3 ☐ FedEx Box 4 ☐ FedEx Tube
1 ☐ Other ___ PW ☐ FedEx 10kg Box* PX ☐ FedEx 25kg Box*

**6 Special Handling**

1 ☐ HOLD at FedEx Location 3 ☐ SATURDAY Delivery — Available to select locations for FedEx Intl. Priority only.

**7 Payment**

Complete payment options for both transportation charges and duties and taxes.

***Bill transportation charges to:***

Enter FedEx Acct. No. or Credit Card No. below.
1 ☐ Sender Acct. No. in Section 1 will be billed. 2 ☐ Recipient 3 ☐ Third Party 4 ☐ Credit Card 5 ☐ Cash Check/Cheque

FedEx Acct. No. [redacted] Total Transportation

Credit Card Exp. Date Specify Currency

***Bill duties and taxes to:***

ALL shipments may be subject to Customs charges, which FedEx does not estimate prior to clearance.
Enter FedEx Acct. No. below.
1 ☐ Sender Acct. No. in Section 1 will be billed. 2 ☐ Recipient 3 ☐ Third Party 5 ☐ Cash Check/Cheque

FedEx Acct. No.

**8 Your Internal Billing Reference**

First 24 characters will appear on invoice.

**9 Required Signature**

Use of this Air Waybill constitutes your agreement to the Conditions of Contract on the back of this Air Waybill, and you represent that this shipment does not require a U.S. State Department License or contain dangerous goods. Certain international treaties, including the Warsaw Convention, may apply to this shipment and limit our liability for damage, loss, or delay, as described in the Conditions of Contract. **WARNING:** These commodities, technology, or software were exported from the United States in accordance with Export Administration Regulations. Diversion contrary to U.S. law prohibited.

**Sender's Signature:**

*This is not authorization to deliver this shipment without a recipient signature.*

Received above shipment in good order and condition. We agree to pay all charges, including Customs duties and taxes as applicable, and we agree to the Conditions of Carriage as stated on the reverse side of the Recipient's Copy.

Recipient's Signature: Jennifer Carlsen 18Dec2019

Not all services and options are available to all destinations. Dangerous goods cannot be shipped using this Air Waybill.

(1) Where applicable, custom lab flags have been used on this report.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = minimum reporting level.

These data are validated and reported as accurate and in accord with SGS AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

**Analysis WG71322**

## 11 March 2020

**MINNESOTA POLLUTION CONTROL AGENCY**
**AQUEOUS SAMPLES** **PER- AND POLYFLUOROALKYL SUBSTANCES ANALYSIS**
**SGS AXYS METHOD: MLA-110**
**4095:** L32557-1 to -11

**Project name: P1007/60608807**
**Work order number: 3000025335**

**11 March 2020**

## NARRATIVE

This narrative describes the analysis of eleven aqueous samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UHPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The sample was received at SGS AXYS on the 17th of January 2020. The temperature of the samples upon receipt ranged from 1.8°C to 3.7°C, meeting the method recommended arrival temperature of 0-4°C. The samples were stored at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in one analysis batch designated as WG71322; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples consisted of a procedural blank, a lab-generated reference sample known as the Ongoing Precision and Recovery (OPR) sample, a matrix spike sample (MS), and a duplicate of the matrix spike sample (MSD). The lab blank and OPRs were prepared using Canadian Springs water as the matrix. Sample MW3B-GW-31-35-03-011320 (SGS AXYS ID: L32557-8) was used as the parent sample for the MS/MSD pair.

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 500 mL of sample was accurately weighed. Each sample was then spiked with isotopically labeled quantification standards and extracted and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. After spiking each sample with labeled recovery (internal) standards, the extracts were analyzed by LC-MS/MS. Analyte concentrations were determined by isotope dilution/internal standard method, comparing the area of the quantification ion to that of the isotopically labeled standard.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard (CS1) or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L32557-X; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS ID with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

The laboratory qualifiers used to report results were as follows:

J = indicates an estimated value where the concentration of the analyte is less than the concentration at

which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RDL)
N = authentic recovery in the OPR is not within method or contract control limits
U = identifies a compound that was not detected
V = surrogate recovery was not within method specifications

Results were reported with concentration units of nanograms per litre (ng/L). Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

The samples and QC samples were analyzed in one analysis batch and were carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, precision, laboratory procedural blank, and labeled compound recovery specifications were met with the following exceptions:

In the continuing calibration verifications (FC0L_035 S:12 and S:38), the surrogate compounds 13C 4:2 FTS, 13C 6:2 FTS and/or 13C 8:2 FTS were observed above the method control limit. As the target analytes 4:2 FTS, 6:2 FTS, and 5:2 FTS were observed within method specifications, this is deemed not to have any effect on the data.

In the OPR (SGS AXYS ID: WG71322-102) PFUnA and PFDoS were observed outside the MPCA contract limits, but met SGS AXYS method control limits and are flagged with an 'N'. Data for these analytes may be similarly affected.

Percent recoveries of several surrogates in the client samples were observed to be outside the method limits and these surrogates have been flagged with a 'V' on the report forms. As the isotope dilution method of quantification produces data that are recovery corrected, the slight variance from the method acceptance criteria is deemed not to affect the quantification of these analytes. Percent surrogate recoveries are used as a general method performance indicator only.

For the Matrix Spike testing samples (SGS AXYS ID's: WG71322-103 and -104), PFOA and PFOS had recoveries under the method criteria for the OPR. Due to the high level at which these analytes were detected in parent sample, the amount spiked into the sample makes up a small portion of the total amount in the sample; recoveries can fluctuate greatly due to instrument variance. Overall, the MS samples showed good agreement between expected and observed results.

**ANALYTICAL DISCUSSION**

No analytical difficulties were encountered.

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup: DPWG71835. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation
- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SGS AXYS Analytical Services Ltd.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 06**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue and AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] |
|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 530-2100 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 |
| Perfluoroalkyl sulfonates | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Fluorotelomer sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | 40 |
| Perfluorooctane sulfonamides | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamide ethanols | 8 | 5300 | 0.8 | 1.6 | 2.0 | 100 |
| Per- and polyfluoroether carboxylates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |
| Ether sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |

1 Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

2 A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

3 A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

4 A maximum of 2 g of tissue may be analyzed.

5 A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. Other AFFF products such as fluoroprotein foams maybe be analyzed using this method, but need special handling. Consult product Safety Data Sheets (SDS) and other information before confirming. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

### Perfluorooctane sulfonamidoacetic acids

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

SGS AXYS confidential, not to be distributed without written permission

**SGS AXYS Analytical Services Ltd.**

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)

Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)

11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction

This is not a controlled document; it is subject to change without notification.

(SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentration of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where} \quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

### 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Procedural Blank Levels and OPR Recovery Ranges

| Compound | Procedural Blank Level (ng/sample) | OPR Recovery Range for Aqueous, Solid and AFFF Samples (%) | OPR Recovery Range for Tissue Samples (%) |
|---|---|---|---|
| PFBA | ≤ 1.6 | 70-130 | 70-130 |
| PFPeA | ≤ 0.8 | 70-130 | 70-130 |
| PFHxA | ≤ 0.4 | 70-130 | 70-130 |
| PFHpA | ≤ 0.4 | 70-130 | 70-130 |
| PFOA | ≤ 0.4 | 70-130 | 70-130 |
| PFNA | ≤ 0.4 | 70-130 | 70-130 |
| PFDA | ≤ 0.4 | 70-130 | 60-130 |
| PFUnA | ≤ 0.4 | 70-130 | 70-140 |
| PFDoA | ≤ 0.4 | 70-130 | 70-130 |
| PFTrDA | ≤ 0.4 | 70-130 | 70-130 |
| PFTeDA | ≤ 0.4 | 70-130 | 70-130 |
| PFBS | ≤ 0.4 | 70-130 | 60-130 |
| PFPeS | ≤ 0.4 | 70-130 | 70-130 |
| PFHxS | ≤ 0.4 | 70-130 | 70-130 |
| PFHpS | ≤ 0.4 | 70-130 | 70-130 |
| PFOS | ≤ 0.4 | 70-130 | 70-140 |
| PFNS | ≤ 0.4 | 70-130 | 60-150 |
| PFDS | ≤ 0.4 | 70-130 | 40-150 |
| PFDoS | ≤ 0.4 | 60-130 | 70-140 |
| 4:2 FTS | ≤ 1.6 | 70-130 | 40-150 |
| 6:2 FTS | ≤ 5 | 70-130 | 70-130 |
| 8:2 FTS | ≤ 1.6 | 70-130 | 70-170 |
| PFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSA | ≤ 0.4 | 70-130 | 50-140 |
| N-EtFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-EtFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-MeFOSE | ≤ 4 | 70-130 | 70-150 |
| N-EtFOSE | ≤ 4 | 70-130 | 70-130 |
| HFPO-DA | ≤ 1.6 | 70-130 | 70-130 |
| ADONA | ≤ 1.6 | 70-130 | 70-130 |
| 9Cl-PF3ONS | ≤1.6 | 70-130 | 70-130 |
| 11Cl-PF3OUdS | ≤ 1.6 | 70-130 | 60-130 |

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Surrogate Standard Recoveries, OPR and Samples

| Surrogate Standard | OPR and Sample Recovery Range [1] for Aqueous, Solid And AFFF Samples [3] (%) | OPR and Sample Recovery Range [1] for Tissue Samples (%) [3] |
|---|---|---|
| $^{13}C_4$-PFBA | 50-150 | 50-150 |
| $^{13}C_5$-PFPeA | 50-150 | 50-150 |
| $^{13}C_5$-PFHxA | 50-150 | 50-150 |
| $^{13}C_4$-PFHpA | 50-150 | 50-150 |
| $^{13}C_8$-PFOA | 50-150 | 50-150 |
| $^{13}C_9$-PFNA | 50-150 | 50-150 |
| $^{13}C_6$-PFDA | 50-150 | 50-180 |
| $^{13}C_7$-PFUnA | 50-150 | 50-150 |
| $^{13}C_2$-PFDoA | 50-150 | 50-150 |
| $^{13}C_2$-PFTeDA | 50-150 | 50-150 |
| | | |
| $^{13}C_3$-PFBS | 50-150 | 50-150 |
| $^{13}C_3$-PFHxS | 50-150 | 50-150 |
| $^{13}C_8$-PFOS | 50-150 | 50-150 |
| | | |
| $^{13}C_2$-4:2 FTS | 50-150 | 50-220 |
| $^{13}C_2$-6:2 FTS | 50-150 | 50-180 |
| $^{13}C_2$-8:2 FTS | 50-150 | 50-300 |
| | | |
| $^{13}C_8$-PFOSA | 50-150 | 50-150 |
| $D_3$-N-MeFOSA | 30-150 | [2] |
| $D_5$-N-EtFOSA | 20-150 | [2] |
| | | |
| $D_3$-N-MeFOSAA | 50-150 | [2] |
| $D_5$-N-EtFOSAA | 50-150 | [2] |
| | | |
| $D_7$-N-MeFOSE | 30-150 | [2] |
| $D_9$-N-EtFOSE | 30-150 | [2] |
| | | |
| $^{13}C_3$-HFPO-DA | 50-150 | 50-150 |

[1] Lower surrogate recoveries may be accepted based on application and professional judgment. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment.

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL. |

**SGS AXYS Analytical Services Ltd.**

| QC Parameter | Specification |
|---|---|
| | Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90 day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies. For aqueous samples under DoD accreditation, the sample hold time is ≤14 days.

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement. For samples under DoD accreditation the extract hold time is ≤28 days with storage at room temperature.

## Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

**PROJECT NAME: P1007/60608807**
**WORK ORDER #: 3000025335**

**27 March 2020**

## NARRATIVE

This narrative describes the analysis of ten aqueous samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UHPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The samples were received on the 4th of March, 2020. Details of sample conditions upon receipt are provided on the Sample Receiving Record form included in the sample documentation section of this data package. The sample was stored at -20˚C in dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with ***SGS AXYS Method MLA-110: Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

The field and QC samples (as a laboratory procedural blank and two lab-generated reference samples known as the Ongoing Precision and Recovery (OPR)) were analyzed in a batch designated as WG71801. Composition of the batch is shown on the Correlation Table included in this data package.

Canadian Springs Water was used as the matrix to prepare the laboratory procedural blank, OPR and OPR Duplicate samples (SGS AXYS IDs: WG71801-101 to -103, respectively).

Approximately 500mL of each sample was accurately weighed and spiked with labelled quantification standards. The sample was then extracted and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. After spiking the sample with labeled recovery (internal) standards, the extract was analyzed by UHPLC-MS/MS. Analyte concentrations were determined by isotope dilution/internal standard method, comparing the area of the quantification ion to that of the isotopically labeled standard. Mean relative response factors (RRF), determined from the multi-level calibration series are used to convert raw peak areas in sample chromatograms to final concentrations.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard analyzed in the initial calibration (CS1), or the sample specific detection limits (SDL), whichever was greater.

**REPORTING CONVENTIONS**

The SGS AXYS contract number assigned for internal tracking was 4095. The sample was assigned a unique laboratory identifier of L32758-XX where 'X' is a numeral. All data reports reference this unique SGS AXYS ID plus the client's sample identifier. To assist with locating data, a table correlating SGS AXYS ID with the client sample number is included in this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

Any extra work required and performed after the initial instrumental analysis of the sample's extract was given an extra "test suffix" code. The single letter code per extra work performed was added to the SGS AXYS sample ID as a suffix and was combined with any other applicable test suffix codes. The extra work code used to report data in this package include:

(A) = parent sample for a duplicate pair

The following laboratory qualifier flags were used in this data package:

J = indicates an estimated value where the concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the sample detection limit (SDL) or lowest method calibration limit (LMCL); whichever was higher
U = identified a compound that was not detected
V = surrogate recovery is not within method control limits

Result were reported with concentration units of nanograms per liter (ng/L). Concentration and detection limits are provided to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

**QA/QC NOTES**

The field and QC samples analyzed in an analysis batch were carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected. Sample data should be evaluated with consideration of the procedural blank results.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and cleanup procedures.
- All initial calibration, calibration verifications, OPRs, laboratory procedural blank, labeled compound recovery and precision specifications were met with the following exceptions:

For the OPR sample (SGS AXYS ID: WG71801-102), the percent recoveries for PFDS and PFNS were below the client specific lower method criteria limit and flagged with an 'N'. The same results met the SGS AXYS method criteria limits. Other data was not considered to be affected.

For the 8099 6432 5990 sample (SGS AXYS ID: L32758-1), the percent recovery for the surrogate compound D3-N-MeFOSA (49.2%) was marginally below the client specific lower method criteria limit (50%) and was flagged with a 'V'. As the isotope dilution method of quantification produces data that is recovery corrected, these variances from method criteria were deemed to not affect the quantification of the target analytes. Percent surrogate recoveries are used as general method performance indicator only.

For the OPR and OPR DUP samples (SGS AXYS IDs: WG71801-102 and -103), the precision (expressed as the relative percent difference; RPD) was above both the client specific and SGS AXYS method criteria limits for the target analyte PFNS as 48.9% RPD. Overall, good precision was demonstrated for all most target analytes.

**ANALYTICAL DISCUSSION**

No analytical difficulties were encountered.

**DATA PACKAGE**

This data package is assigned a unique identifier, DPWG71978, as shown on the title page of the data package. Included in the data package after this narrative are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation
- Sample data reports (in order of SGS AXYS ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 06**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue and AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] |
|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 530-2100 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 |
| Perfluoroalkyl sulfonates | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Fluorotelomer sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | 40 |
| Perfluorooctane sulfonamides | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamide ethanols | 8 | 5300 | 0.8 | 1.6 | 2.0 | 100 |
| Per- and polyfluoroether carboxylates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |
| Ether sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |

1 Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

2 A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

3 A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

4 A maximum of 2 g of tissue may be analyzed.

5 A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. Other AFFF products such as fluoroprotein foams maybe be analyzed using this method, but need special handling. Consult product Safety Data Sheets (SDS) and other information before confirming. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

### Perfluorooctane sulfonamidoacetic acids

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

SGS AXYS confidential, not to be distributed without written permission

**SGS AXYS Analytical Services Ltd.**

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)

Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)

11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction

SGS AXYS Analytical Services Ltd, 2045 Mills Road W., Sidney, BC, Canada, V8L 5X2. Tel. (250) 655-5800, fax (250) 655-5811.
This is not a controlled document; it is subject to change without notification.

(SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

**List of Surrogate and Recovery Standards**

| Surrogate Standards | Recovery Standards |
|---|---|
| $^{13}C_4$-PFBA | $^{13}C_3$-PFBA |
| $^{13}C_5$-PFPeA | $^{13}C_2$-PFHxA |

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentration of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where} \quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

### 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Procedural Blank Levels and OPR Recovery Ranges

| Compound | Procedural Blank Level (ng/sample) | OPR Recovery Range for Aqueous, Solid and AFFF Samples (%) | OPR Recovery Range for Tissue Samples (%) |
|---|---|---|---|
| PFBA | ≤ 1.6 | 70-130 | 70-130 |
| PFPeA | ≤ 0.8 | 70-130 | 70-130 |
| PFHxA | ≤ 0.4 | 70-130 | 70-130 |
| PFHpA | ≤ 0.4 | 70-130 | 70-130 |
| PFOA | ≤ 0.4 | 70-130 | 70-130 |
| PFNA | ≤ 0.4 | 70-130 | 70-130 |
| PFDA | ≤ 0.4 | 70-130 | 60-130 |
| PFUnA | ≤ 0.4 | 70-130 | 70-140 |
| PFDoA | ≤ 0.4 | 70-130 | 70-130 |
| PFTrDA | ≤ 0.4 | 70-130 | 70-130 |
| PFTeDA | ≤ 0.4 | 70-130 | 70-130 |
| PFBS | ≤ 0.4 | 70-130 | 60-130 |
| PFPeS | ≤ 0.4 | 70-130 | 70-130 |
| PFHxS | ≤ 0.4 | 70-130 | 70-130 |
| PFHpS | ≤ 0.4 | 70-130 | 70-130 |
| PFOS | ≤ 0.4 | 70-130 | 70-140 |
| PFNS | ≤ 0.4 | 70-130 | 60-150 |
| PFDS | ≤ 0.4 | 70-130 | 40-150 |
| PFDoS | ≤ 0.4 | 60-130 | 70-140 |
| 4:2 FTS | ≤ 1.6 | 70-130 | 40-150 |
| 6:2 FTS | ≤ 5 | 70-130 | 70-130 |
| 8:2 FTS | ≤ 1.6 | 70-130 | 70-170 |
| PFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSA | ≤ 0.4 | 70-130 | 50-140 |
| N-EtFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-EtFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-MeFOSE | ≤ 4 | 70-130 | 70-150 |
| N-EtFOSE | ≤ 4 | 70-130 | 70-130 |
| HFPO-DA | ≤ 1.6 | 70-130 | 70-130 |
| ADONA | ≤ 1.6 | 70-130 | 70-130 |
| 9Cl-PF3ONS | ≤1.6 | 70-130 | 70-130 |
| 11Cl-PF3OUdS | ≤ 1.6 | 70-130 | 60-130 |

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Surrogate Standard Recoveries, OPR and Samples

| Surrogate Standard | OPR and Sample Recovery Range [1] for Aqueous, Solid And AFFF Samples [3] (%) | OPR and Sample Recovery Range [1] for Tissue Samples (%) [3] |
|---|---|---|
| $^{13}C_4$-PFBA | 50-150 | 50-150 |
| $^{13}C_5$-PFPeA | 50-150 | 50-150 |
| $^{13}C_5$-PFHxA | 50-150 | 50-150 |
| $^{13}C_4$-PFHpA | 50-150 | 50-150 |
| $^{13}C_8$-PFOA | 50-150 | 50-150 |
| $^{13}C_9$-PFNA | 50-150 | 50-150 |
| $^{13}C_6$-PFDA | 50-150 | 50-180 |
| $^{13}C_7$-PFUnA | 50-150 | 50-150 |
| $^{13}C_2$-PFDoA | 50-150 | 50-150 |
| $^{13}C_2$-PFTeDA | 50-150 | 50-150 |
| | | |
| $^{13}C_3$-PFBS | 50-150 | 50-150 |
| $^{13}C_3$-PFHxS | 50-150 | 50-150 |
| $^{13}C_8$-PFOS | 50-150 | 50-150 |
| | | |
| $^{13}C_2$-4:2 FTS | 50-150 | 50-220 |
| $^{13}C_2$-6:2 FTS | 50-150 | 50-180 |
| $^{13}C_2$-8:2 FTS | 50-150 | 50-300 |
| | | |
| $^{13}C_8$-PFOSA | 50-150 | 50-150 |
| $D_3$-N-MeFOSA | 30-150 | [2] |
| $D_5$-N-EtFOSA | 20-150 | [2] |
| | | |
| $D_3$-N-MeFOSAA | 50-150 | [2] |
| $D_5$-N-EtFOSAA | 50-150 | [2] |
| | | |
| $D_7$-N-MeFOSE | 30-150 | [2] |
| $D_9$-N-EtFOSE | 30-150 | [2] |
| | | |
| $^{13}C_3$-HFPO-DA | 50-150 | 50-150 |

[1] Lower surrogate recoveries may be accepted based on application and professional judgment. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment.

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL. |

**SGS AXYS Analytical Services Ltd.**

| QC Parameter | Specification |
|---|---|
| | Calculated analyte conc. 70-130% of actual.<br>Calculated surrogate recovery 50 – 150%.<br>*Additional requirement for DoD: Run Cal/Ver every 10 client samples or every 12 hours, whichever occurs first, and at the end of the analytical sequence; quantify against I-CAL. Calculated conc. must be 70- 130 % of actual.*<br>For internal purposes monitor Peak Asymmetry for every Cal/Ver |
| Instrumental Carryover and Instrument Background | An instrument blank containing surrogates is run after every Initial Calibration, Cal/Ver, or OPR. The specification is ≤ 0.3 % carryover from the standard into following instrument blank. This specification covers the *requirement for DoD that the concentration of each analyte in the instrument blank must be ≤ ½ of the LOQ (C CAL).* |
| Duplicate Samples | If conc. ≥ 5 times R.L., RPD ≤ 40%<br>If conc. < 5 times R.L., guideline RPD ≤ 100% |
| MS/MSD | Optional test, client must request. Spiking at the OPR level.<br>MS/MSD Analyte recoveries are evaluated against OPR limits, see Table 6a.<br>RPD ≤ 40%<br>*Additional requirement for DoD: For all matrices analyzed by SPE one Matrix Spike and one Matrix Spike Duplicate shall be included with every analysis batch. MS/MSD recoveries are evaluated against project limits if prescribed by the client, otherwise MS/MSD recoveries are evaluated against the DOD specific acceptance ranges for OPRs listed in Table 6b of this document, or against the MLA-110 OPR method recovery limits for analytes not listed in Table 6b (see Table 6a). RPDs are evaluated against project limits if prescribed by the client, otherwise RPDs are evaluated against the DoD specific limit of ≤30%.* |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90 day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies. For aqueous samples under DoD accreditation, the sample hold time is ≤14 days.

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement. For samples under DoD accreditation the extract hold time is ≤28 days with storage at room temperature.

## Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

# PERFLUORINATED ORGANIC & FTS ANALYSIS

## AQUEOUS SAMPLES

### PROJECT NAME: P1007/60608807

### WORK ORDER #: 3000025335

**Contract: 4095**
**Data Package Identification: DPWG72193**

**Analysis WG71744 / WG71745**

## 21 April 2020

**MINNESOTA POLLUTION CONTROL AGENCY**
**AQUEOUS SAMPLES** **PER- AND POLYFLUOROALKYL SUBSTANCES ANALYSIS**
**SGS AXYS METHOD: MLA-110**
**4095:** L32744-1 to -30

**Project name: P1007/60608807**
**Work order number: 3000025335**

**21 April 2020**

## NARRATIVE

This narrative describes the analysis of thirty aqueous samples for the determination of per- and polyfluoroalkyl organic compounds by ultra-high performance liquid chromatography/tandem mass spectrometry (UHPLC-MS/MS).

## SAMPLE RECEIPT AND STORAGE

The sample was received at SGS AXYS on the 28th of February 2020. The temperature of the samples upon receipt ranged from 1.9˚C to 5.8˚C, slightly exceeding the method recommended arrival temperature of 0-4°C for some samples. The samples were stored at -20˚C in the dark prior to extraction and analysis.

## SAMPLE EXTRACTION AND ANALYSIS

The field and QC samples were analyzed in two analysis batches designated as WG71744 and WG71745; the composition of the batch is shown on the Correlation Table included with this data package. The QC samples consisted of a procedural blank, a lab-generated reference sample known as the Ongoing Precision and Recovery (OPR) sample, a matrix spike sample (MS), and a duplicate of the matrix spike sample (MSD). The lab blank and OPRs were prepared using Canadian Springs water as the matrix. Sample RC17A-WAT-BULK-03-022420 (SGS AXYS ID: L32744-13) was used as the parent sample for the MS/MSD pair in WG71744. Sample WL9-WAT-BULK-03-022520 (SGS AXYS ID: L32744-27) was used as the parent sample for the MS/MSD pair in WG71745.

Sample extraction, instrumental analysis, and analyte quantification procedures were done in accordance with SGS AXYS Method MLA-110: ***Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids and Solvent Extracts by LC-MS/MS***. A method summary (MSU-110) of SGS AXYS Method MLA-110 is included with the data package.

Approximately 500 mL of sample was accurately weighed. The samples RC5-FOAM-01-022420, RC7A-FOAM-01-022420, WL9-WAT-SML-02-022520 and WL6-FOAM-01-022520 (SGS AXYS ID: L32744-6, -9, -24, and -30, respectively) were spiked with 10x nominal isotopically labeled quantification standards, extracted, split 1/10th and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. The rest of the samples were spiked with isotopically labeled quantification standards and extracted and cleaned up by solid phase extraction (SPE) using a disposable cartridge containing a weak anion exchange sorbent. After spiking each sample with labeled recovery (internal) standards, the extracts were analyzed by LC-MS/MS. Analyte concentrations were determined by isotope dilution/internal standard method, comparing the area of the quantification ion to that of the isotopically labeled standard.

The reporting limit (RL) was defined as the concentration equivalent to the lowest calibration standard (CS1) or the sample specific detection limit (SDL), whichever was greater.

## REPORTING CONVENTIONS

The SGS AXYS contract number assigned for internal tracking was 4095. The samples were assigned a unique laboratory identifier L32744-XX; where X is a numeral; all data reports reference this unique SGS AXYS ID plus the client sample identifier. To assist in locating data, a table correlating the SGS AXYS ID with the client sample numbers is included with this data package. The report forms were generated using Laboratory Information Management Systems (LIMS) software.

Any extra work required and performed after the initial instrumental analysis of the sample extract was given an extra "test suffix" code. The single letter code per extra work performed was added to the SGS AXYS sample ID as a suffix, and was combined with any other applicable test suffix codes. The extra work code used to report data in this package include:

(A) = parent sample for a duplicate pair
N = dilution of the sample extract followed by instrumental analysis

The laboratory qualifiers used to report results were as follows:

J = indicates an estimated value where the concentration of the analyte is less than the concentration at which test accuracy has been demonstrated (LOQ) but greater than the reporting limit (RDL)
N = authentic recovery in the OPR is not within method or contract control limits
U = identifies a compound that was not detected
V = surrogate recovery was not within method specifications
E = exceeds calibrated linear range, see dilution data
X = result reported separately
D = dilution data
R = peak detected but did not meet quantification criteria

Results were reported with concentration units of nanograms per litre (ng/L). Concentration and detection limits were reported to three significant figures. Analysis results for each sample are provided on Analysis Report forms 1A and 2.

## QA/QC NOTES

The samples and QC samples were analyzed in two analysis batches and were carried intact through the entire analytical process. The sample data were reviewed and evaluated in relation to the batch QC samples.

- Sample analyte concentrations are not blank corrected and should be evaluated with the laboratory procedural blank results considered.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and clean up.
- All linearity, calibration verification, OPR, precision, laboratory procedural blank, and labeled compound recovery specifications were met with the following exceptions:

### *WG71744*

An interference was observed affecting PFNS in samples RC5-FOAM-01-022420 and RC7A-FOAM-01-022420 (SGS AXYS ID: L32744-6 and -9, respectively) and has been flagged with 'R' on the report form. The reported concentration of this analyte should be interpreted as the 'estimated' maximum concentration.

The Relative Percent Difference (RPD) value of above 30% was observed for analyte PFDoA between the Matrix Spike and the Matrix Spike duplicate (SGS AXYS ID: WG71744-103 and -104, respectively). Overall, there was good agreement in target analyte concentrations between the samples.

Percent recovery of labeled compounds $D_3$-N-MeFOSA and $D_5$-N-EtFOSA in the sample 8099 6432 5978 (SGS AXYS ID: L32744-3) and labeled compound $^{13}C_2$-PFTeDA in sample RC5-FOAM-01-022420 (SGS AXYS ID: L32744-6) were below the client nominal limit and were flagged with a 'V'. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only.

The analyst noted on the lab work-up sheet that a portion of the sample RC5-FOAM-01-022420 (SGS AXYS ID: L32744-6) did not go through the SPE column during extraction / clean-up procedure. This has been taken into account when calculating the reporting limits and labeled compound recoveries. Data are not considered to be significantly affected.

The sample listed below has been updated with a new Client ID as per client request.

| SGS AXYS ID | Client ID | Revised Client ID |
|---|---|---|
| L32744-15 | EP10-WAT-BULK-01-022520 | EP11-WAT-BULK-01-022520 |

***WG71745***

Percent recovery of analyte PFNS in the OPR (SGS AXYS ID: WG71745-102) was below the contract limit but within the SGS AXYS method limit and was flagged with an 'N'.

Percent recovery of analyte PFBA and PFOS in the Matrix Spike and Matrix Spike duplicate (SGS AXYS ID: WG71745-103 and -104, respectively) were below the contract limit.

Percent recovery of labeled compounds $^{13}C_2$-PFTeDA in the sample RC21-FOAM-01-022420 (SGS AXYS ID: L32744-22) and $^{13}C_4$-PFBA in the sample WL9-WAT-SML-02-022520 (SGS AXYS ID: L32744-24) were below the contract limit and was flagged with a 'V'. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only.

The analyst noted on the lab work-up sheet that a portion of the sample RC21-FOAM-01-022420 (SGS AXYS ID: L32744-22) did not go through the SPE column during extraction / clean-up procedure. This has been taken into account when calculating the reporting limits and labeled compound recoveries. Data are not considered to be significantly affected.

The sample listed below has been updated with a new Client ID as per client request.

| SGS AXYS ID | Client ID | Revised Client ID |
|---|---|---|
| L32744-16 | EP10-WAT-BULK-01-022520 | EP11-WAT-BULK-01-022520 |

**ANALYTICAL DISCUSSION**

***WG71744***

The samples RC3-WAT-BULK-01-022420, RC5-WAT-BULK-01-022420, and RC5-FOAM-01-022420 (SGS AXYS ID: L32744-4, -5, and -6, respectively) were diluted and instrumentally re-analyzed to bring the area response of some targets to within the calibrated linear range of the instrument. The affected target concentrations are reported from the diluted extract (indicated by suffix '**N**' on the SGS AXYS ID). The dilution factors are provided on the reports for the dilution analyses.

***WG71745***

The samples RC21-FOAM-01-022420 and WL6-FOAM-01-022520 (SGS AXYS ID: L32744-22, and -30, respectively) were diluted and instrumentally re-analyzed to bring the area response of some targets to within the calibrated linear range of the instrument. The affected target concentrations are reported from the diluted extract (indicated by suffix '**N**' on the SGS AXYS ID). The dilution factors are provided on the reports for the dilution analyses.

**DATA PACKAGE**

This data package was assigned a unique data package identification workgroup: DPWG72193. This ID is shown on the front page of the data package. Included in the data package following this narrative report are the following documents:

- Method summary
- Sample 'Correlation Table'
- Sample receiving documentation

- Sample data reports (in order of SGS AXYS Sample ID)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Accreditation Scope

---

**I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of SGS AXYS Analytical Services Ltd, authorizes the release of the data contained in this data package.**

**SUMMARY OF SGS AXYS METHOD MLA-110 REV. 02 VER. 06**

# Analytical Procedure for the Analysis of Per- and Polyfluoroalkyl Substances (PFAS) in Aqueous Samples, Solids, Tissues, AFFF Products and Solvent Extracts by LC-MS/MS

This method describes the analysis of per- and polyfluoroalkyl substances (PFAS) in aqueous, solid, biosolid, tissue and AFFF product samples and solvent extracts, determined as the total of linear and branched isomers. After spiking with isotopically labeled surrogate standards samples are extracted and cleaned up by Solid Phase Extraction (SPE). The extracts are then analyzed by liquid chromatography/mass spectrometry (LC-MS/MS). Final sample concentrations are determined by isotope dilution/internal standard quantification.

Typical reporting limits are shown below, for the method default sample sizes:

| Analyte groups | Aqueous sample | Extract [1] | Solid [2] | Biosolid [3] | Tissues [4] | AFFF Products[5] |
|---|---|---|---|---|---|---|
| Typical sample size | 0.5 L | 0.75 mL | 5 g | 2.5 g | 2.0 g | 0.02 g |
| Units | ng/L | ng/mL | ng/g | ng/g | ng/g | ng/g |
| Perfluoroalkyl carboxylates | 0.8-3.2 | 530-2100 | 0.08-0.32 | 0.16-0.64 | 0.2-0.8 | 10-40 |
| Perfluoroalkyl sulfonates | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Fluorotelomer sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | 40 |
| Perfluorooctane sulfonamides | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamidoacetic acids | 0.8 | 530 | 0.08 | 0.16 | 0.2 | 10 |
| Perfluorooctane sulfonamide ethanols | 8 | 5300 | 0.8 | 1.6 | 2.0 | 100 |
| Per- and polyfluoroether carboxylates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |
| Ether sulfonates | 3.2 | 2100 | 0.32 | 0.64 | 0.8 | N/A |

1 Detection limits for extract samples depend on the samples size processed. The reporting limits provided here are based on the typical extract sample size listed above.

2 A maximum of 10 g wet, or 5 g dry, solid may be analyzed.

3 A maximum of 5 g wet, or 0.5 g dry, biosolid may be analyzed.

4 A maximum of 2 g of tissue may be analyzed.

5 A maximum of 0.02 g of AFFF Product is analyzed. Reporting limits are based on the calibration A point. The method is not currently validated for ether carboxylates/sulfonates in AFFF samples. Only Class B aqueous film forming foams (AFFF) or alcohol-resistant AFFF (AR-AFFF) samples are part of this scope. Other AFFF products such as fluoroprotein foams maybe be analyzed using this method, but need special handling. Consult product Safety Data Sheets (SDS) and other information before confirming. All samples will be logged in under an “AQIP” (Aqueous Industrial Product) matrix code in LIMS.

## PFAS Target Analytes

### Perfluoroalkyl carboxylates

Perfluorobutanoic acid (PFBA, Perfluorobutanoate)
Perfluoropentanoic acid (PFPeA, Perfluoropentanoate)
Perfluorohexanoic acid (PFHxA, Perfluorohexanoate)
Perfluoroheptanoic acid (PFHpA, Perfluoroheptanoate)
Perfluorooctanoic acid (PFOA, Perfluorooctanoate)
Perfluorononanoic acid (PFNA, Perfluorononanoate)
Perfluorodecanoic acid (PFDA, Perfluorodecanoate)
Perfluoroundecanoic acid (PFUnA, Perfluoroundecanoate)
Perfluorododecanoic acid (PFDoA, Perfluorododecanoate)
Perfluorotridecanoic acid (PFTrDA, Perfluorotridecanoate)
Perfluorotetradecanoic acid (PFTeDA, Perfluorotetradecanoate)

### Perfluoroalkyl sulfonates

Perfluorobutanesulfonic acid (PFBS, Perfluorobutanesulfonate)
Perfluoropentanesulfonic acid (PFPeS, Perfluoropentanesulfonate)
Perfluorohexanesulfonic acid (PFHxS, Perfluorohexanesulfonate)
Perfluoroheptanesulfonic acid (PFHpS, Perfluoroheptanesulfonate)
Perfluorooctanesulfonic acid (PFOS, Perfluorooctanesulfonate)
Perfluorononanesulfonic acid (PFNS, Perfluorononanesulfonate)
Perfluorodecanesulfonic acid (PFDS, Perfluorodecanesulfonate)
Perfluorododecanesulfonic acid (PFDoS, Perfluorododecanesulfonate)

### Fluorotelomer sulfonates

1H, 1H, 2H, 2H-perfluorohexane sulfonic acid (4:2 FTS, 1H, 1H, 2H, 2H-perfluorohexane sulfonate)
1H, 1H, 2H, 2H-perfluorooctane sulfonic acid (6:2 FTS, 1H, 1H, 2H, 2H-perfluorooctane sulfonate)
1H, 1H, 2H, 2H-perfluorodecane sulfonic acid (8:2 FTS, 1H, 1H, 2H, 2H-perfluorodecane sulfonate)

### Perfluorooctane sulfonamides

Perfluorooctanesulfonamide (PFOSA) [1]
N-Methylperfluorooctanesulfonamide (N-MeFOSA)
N-Ethylperfluorooctanesulfonamide (N-EtFOSA)

### Perfluorooctane sulfonamidoacetic acids

N-Methylperfluoro-1-octanesulfonamidoacetic acid (N-MeFOSAA, N-Methylperfluoro-1-octanesulfonamidoacetate)
N-Ethylperfluoro-1-octanesulfonamidoacetic acid (N-EtFOSAA, N-Ethylperfluoro-1-octanesulfonamidoacetate)

SGS AXYS confidential, not to be distributed without written permission

**SGS AXYS Analytical Services Ltd.**

**Perfluorooctane sulfonamidoethanols**

N-Methylperfluoro-1-octanesulfonamidoethanol (N-MeFOSE)

N-Ethylperfluoro-1-octanesulfonamidoethanol (N-EtFOSE)

**Ether carboxylates**

2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionic acid (HFPO-DA, 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)propionoate)

Decafluoro-3H-4,8-dioxanonoate (ADONA, DONA, Decafluoro-3H-4,8-dioxanonoic acid)

**Ether sulfonates**

9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS, 9-chlorohexadecafluoro-3-oxanonane-1-sulfonate)

11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS, 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate)

[1] PFOSA also called FOSA

The carboxylic and sulfonic acid analyte concentrations can be reported as either the acid or the anion forms. The anion and corresponding acid forms and their CAS Registry Numbers are shown in Appendix A of this summary.

## 1.0 EXTRACTION AND CLEANUP PROCEDURES

Aqueous samples size may be up to 1000 mL for aqueous samples analyzed by this method, and up to 0.75 mL for extracts/solvents. Samples are stored in HDPE (high density polyethylene) containers. All samples are spiked with surrogate standards. Aqueous samples are extracted by solid phase extraction (SPE) using weak anion exchange cartridges; wash and elution procedures are chosen to meet various analysis requirements. Sample extracts are then treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

Extract/solvent samples don't undergo solid phase extraction. The samples are spiked with surrogate and recovery standards, and analyzed by LC-MS/MS.

Solid and biosolid sample size may be up to 5 g dry weight for solid samples or up to 5 g wet weight (max. 0.5 g dry weight) for biosolid samples. After addition of isotopically labelled surrogate standards the sample is extracted by shaking three times with methanolic ammonium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction (SPE) using disposable cartridges containing a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

Tissue sample size may be up to 2 g. After addition of isotopically labelled surrogate standards the sample is extracted with methanolic potassium hydroxide solution, with acetonitrile, and finally with methanolic potassium hydroxide solution, each time collecting the supernatants. The supernatants are combined, treated with ultra pure carbon powder and evaporated to remove methanol. The resulting solution is diluted with water and cleaned up by solid phase extraction

(SPE) on a weak anion exchange sorbent. The eluate is spiked with recovery standards and analyzed by LC-MS/MS.

All AFFF samples are pre-screened before analysis to determine the appropriate amount of sample to analyze. A suitable subsample is dissolved in water, spiked with surrogate standards and extracted by solid phase extraction (SPE). The extracts are treated with carbon powder, spiked with recovery standards and analyzed by LC-MS/MS.

## 2.0 INSTRUMENTATION

Analysis of the sample extract is performed on a UPLC (ultrahigh performance liquid chromatography) reversed phase C18 column using a solvent gradient. The column is coupled to a triple quadrupole mass spectrometer run at unit mass resolution in the Multiple Reaction Monitoring (MRM) in negative electrospray ionization mode.

## 3.0 CALIBRATION

Initial calibration of the LC-MS/MS instrument is performed by the analysis of five or more calibration solutions. A mid-level calibration standard is analyzed to verify the initial calibration and injected after:

- at least every 12 hours.
- For DoD accredited work after every 10 client samples or every 12 hours, whichever occurs first, and at the end of the instrumental run sequence.

**List of Surrogate and Recovery Standards**

## 4.0 QUANTIFICATION PROCEDURES

### Calculations

Target compounds are quantified using the isotope dilution/internal standard method, comparing the area of the primary (quantifying) transition product ion of the target compound to that of the $^{13}C$-labelled or deuterium labeled standard and correcting for response factors. Mean relative response factors (RRF), determined from the multi-level initial calibration series are used to convert raw peak areas in sample chromatograms to final concentrations as follows:

$$\text{Concentration of Target} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{RRF}}\right) \times \left(\frac{1}{\text{weight of sample}}\right)$$

$$\textit{where} \quad \text{RRF} = \left(\frac{\text{area of Target}}{\text{area of Qt Std}}\right) \times \left(\frac{\text{weight of Qt Std}}{\text{weight of Target}}\right)$$

*and the Qt Std is either the surrogate or the internal standard*

The isotopically labeled analog of an analyte (surrogate) is used for quantitation (Isotope Dilution Quantitation). If a labeled analog is not commercially available, a surrogate with chemical similarity and close retention time is used for quantitation (internal standard quantitation). Final target concentrations are recovery corrected by this method of quantification.

## 4.1 Reporting Limits

Sample Specific Detection Limits (SDL) are determined by converting the area equivalent to 3.0 times the estimated chromatographic noise height to a concentration in the same manner that target peak responses are converted to final concentrations. The SDL accounts for any effect of matrix on the detection system and for recovery achieved through the analytical work-up.

Results are reported to the greater of the SDL or the concentration equivalent to the lowest calibration standard analyzed.

## 5.0 QUALITY ACCEPTANCE CRITERIA

Samples are analyzed in batches consisting of a maximum of twenty samples, one procedural blank and one spiked matrix (OPR) sample. A duplicate is analyzed, provided there is sufficient sample, with batches containing 7-20 samples. Matrix spike/matrix spike duplicate (MS/MSD) pairs may be analyzed on an individual contract basis. The batch is carried through the complete analytical process as a unit. For sample data to be reportable, the batch QC data must meet the established acceptance criteria presented on the analysis reports.

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Procedural Blank Levels and OPR Recovery Ranges

| Compound | Procedural Blank Level (ng/sample) | OPR Recovery Range for Aqueous, Solid and AFFF Samples (%) | OPR Recovery Range for Tissue Samples (%) |
|---|---|---|---|
| PFBA | ≤ 1.6 | 70-130 | 70-130 |
| PFPeA | ≤ 0.8 | 70-130 | 70-130 |
| PFHxA | ≤ 0.4 | 70-130 | 70-130 |
| PFHpA | ≤ 0.4 | 70-130 | 70-130 |
| PFOA | ≤ 0.4 | 70-130 | 70-130 |
| PFNA | ≤ 0.4 | 70-130 | 70-130 |
| PFDA | ≤ 0.4 | 70-130 | 60-130 |
| PFUnA | ≤ 0.4 | 70-130 | 70-140 |
| PFDoA | ≤ 0.4 | 70-130 | 70-130 |
| PFTrDA | ≤ 0.4 | 70-130 | 70-130 |
| PFTeDA | ≤ 0.4 | 70-130 | 70-130 |
| PFBS | ≤ 0.4 | 70-130 | 60-130 |
| PFPeS | ≤ 0.4 | 70-130 | 70-130 |
| PFHxS | ≤ 0.4 | 70-130 | 70-130 |
| PFHpS | ≤ 0.4 | 70-130 | 70-130 |
| PFOS | ≤ 0.4 | 70-130 | 70-140 |
| PFNS | ≤ 0.4 | 70-130 | 60-150 |
| PFDS | ≤ 0.4 | 70-130 | 40-150 |
| PFDoS | ≤ 0.4 | 60-130 | 70-140 |
| 4:2 FTS | ≤ 1.6 | 70-130 | 40-150 |
| 6:2 FTS | ≤ 5 | 70-130 | 70-130 |
| 8:2 FTS | ≤ 1.6 | 70-130 | 70-170 |
| PFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSA | ≤ 0.4 | 70-130 | 50-140 |
| N-EtFOSA | ≤ 0.4 | 70-130 | 70-130 |
| N-MeFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-EtFOSAA | ≤ 0.4 | 70-130 | 60-140 |
| N-MeFOSE | ≤ 4 | 70-130 | 70-150 |
| N-EtFOSE | ≤ 4 | 70-130 | 70-130 |
| HFPO-DA | ≤ 1.6 | 70-130 | 70-130 |
| ADONA | ≤ 1.6 | 70-130 | 70-130 |
| 9Cl-PF3ONS | ≤1.6 | 70-130 | 70-130 |
| 11Cl-PF3OUdS | ≤ 1.6 | 70-130 | 60-130 |

Marginal exceedance allowance – results for one compound may fall outside of these limits by a maximum of 10% of the value. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment. DoD specification for procedural blanks: No analytes detected >½ LOQ or > 1/10$^{th}$ the amount measured in any sample or 1/10$^{th}$ the regulatory limit, whichever is greater

### QC Specifications for Aqueous, Solid, AFFF and Tissue Samples: Surrogate Standard Recoveries, OPR and Samples

| Surrogate Standard | OPR and Sample Recovery Range [1] for Aqueous, Solid And AFFF Samples [3] (%) | OPR and Sample Recovery Range [1] for Tissue Samples (%) [3] |
|---|---|---|
| $^{13}C_4$-PFBA | 50-150 | 50-150 |
| $^{13}C_5$-PFPeA | 50-150 | 50-150 |
| $^{13}C_5$-PFHxA | 50-150 | 50-150 |
| $^{13}C_4$-PFHpA | 50-150 | 50-150 |
| $^{13}C_8$-PFOA | 50-150 | 50-150 |
| $^{13}C_9$-PFNA | 50-150 | 50-150 |
| $^{13}C_6$-PFDA | 50-150 | 50-180 |
| $^{13}C_7$-PFUnA | 50-150 | 50-150 |
| $^{13}C_2$-PFDoA | 50-150 | 50-150 |
| $^{13}C_2$-PFTeDA | 50-150 | 50-150 |
| | | |
| $^{13}C_3$-PFBS | 50-150 | 50-150 |
| $^{13}C_3$-PFHxS | 50-150 | 50-150 |
| $^{13}C_8$-PFOS | 50-150 | 50-150 |
| | | |
| $^{13}C_2$-4:2 FTS | 50-150 | 50-220 |
| $^{13}C_2$-6:2 FTS | 50-150 | 50-180 |
| $^{13}C_2$-8:2 FTS | 50-150 | 50-300 |
| | | |
| $^{13}C_8$-PFOSA | 50-150 | 50-150 |
| $D_3$-N-MeFOSA | 30-150 | [2] |
| $D_5$-N-EtFOSA | 20-150 | [2] |
| | | |
| $D_3$-N-MeFOSAA | 50-150 | [2] |
| $D_5$-N-EtFOSAA | 50-150 | [2] |
| | | |
| $D_7$-N-MeFOSE | 30-150 | [2] |
| $D_9$-N-EtFOSE | 30-150 | [2] |
| | | |
| $^{13}C_3$-HFPO-DA | 50-150 | 50-150 |

[1] Lower surrogate recoveries may be accepted based on application and professional judgment. Note that for AFFF products, these are interim specifications and data outside the specifications may be acceptable based on application and professional judgment.

[2] These surrogates used only to quantify the analogous native compounds. Formal surrogate recovery limits are under review.

[3] For DoD: Surrogate recoveries are determined by comparing surrogate peak area in samples to surrogate's area measured in the day's initial cal/ver (or I-CAL if run that day).

## QC Specification Table: Other Parameters

| QC Parameter | Specification |
|---|---|
| MS Acquisition Rate | Minimum acquisition rate for every native analyte and labeled compound peak: At least 10 data points per peak. |
| Instrument Sensitivity | Daily, S:N ≥ 10:1 for the primary transition product ion for all analytes for the lowest calibration standard (CAL B) and S:N ≥ 3:1 for the secondary ion.<br>*Additional requirement for DoD: Prior to sample analysis and then at least once every 12 hours, verify sensitivity at the LOQ level by running CAL C The found analyte concentrations must be within ±30% of the true values.* |
| Mass Calibration | Instrument must have a valid mass calibration following the manufacturer specified procedure prior to any sample analysis. The mass calibration is updated on an as-needed basis (e.g. QC failures, ion masses fall outside of the ±0.5 amu of the true value, major instrument maintenance, or if the instrument is moved.)<br>Refer to SIN-033. The entire range (bracketing all the masses of the target analytes) must be mass calibrated. The maximal allowed residual error is ≤ 0.1 Da for each mode with no more than two calibration points missed. |
| Mass Calibration Verification | Mass calibration is verified after each mass calibration, prior to initial ICAL. Mass calibration must be verified to be ±0.5 amu of true value by acquiring a full scan continuum mass spectrum of a PFAS stock standard OR by following the instrument manufacturer's instructions for performing a mass calibration verification and using the instrument manufacturer's recommended standards as long as these standards cover the mass range of the PFAS ions of interest. |
| Initial Calibration (I-CAL) | Run initially, and as required to maintain calibration verification and instrument sensitivity. CAL A is a sensitivity standard S:N ≥ 3:1 for the primary transition product ion for all analytes. CAL B is the default lowest calibration standard. (CAL A is not included in determination of the RRF).<br>Quantification is achieved by the constant RRF method. The I-CAL specifications for the RRF fit are <20% RSD of mean RRFs and 70-130 % recovery of analytes at each concentration level down to C level. The recovery specification for the B CAL is 50-200%. The surrogate recovery specifications are 50-150% recovery at each concentration level.<br>Peak Asymmetry: 0.8-1.5 for PFBA and PFPeA measured in CAL E (mid cal point) at 10% of the peak height. If this is not achieved, perform instrument maintenance and re-run I-CAL. |
| Initial Calibration Verification (ICV): | After each Initial Calibration (I-CAL) and prior to sample analysis; analyze a second source standard (similar concentration to the CAL E); quantify against I-Cal, results must meet Cal/Ver accuracy specifications. |
| Calibration Verification (Cal/Ver or CCV) | Continuing Calibration Verification using CAL E<br>Run every 12 hours, quantify against I-CAL. |

# Appendix B: Sample Storage Conditions

## Sample Storage Requirements

| Matrix | Sample Size (per analysis) | Sample Container [1] | Sample Condition Upon Receipt | Storage Condition [2] | Sample Hold Time [3] | Extract Hold Time [4] | Preservation |
|---|---|---|---|---|---|---|---|
| Aqueous | Up to 1000 mL, but typically 500 mL or less (max. 50 mg solids) | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 90 days | 30 days | None Required |
| Solvent extracts | Typically 0.75 mL | High density polyethylene (HDPE) | 0-4°C, dark | 0-4°C, dark | 60 days | 30 days | None Required |
| Solid | Up to 5 g dry but not more than 10 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Biosolid | Up to 0.5 g dry but not more than 5 g wet. | High density polyethylene (HDPE) | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None required |
| Tissue | Up to 2 g (wet) | High density polyethylene (HDPE) or amber glass jar | 0-4°C, dark | ≤ -20ºC, dark | 1 Year | 30 days | None Required |
| AFFF | Up to 0.02 g | High density polyethylene (HDPE) | Room temperature. | 0-4°C, dark | 90 days | 30 days | None Required |

[1] HDPE containers are preferred; amber glass containers are also acceptable. All containers should be organically clean; i.e. solvent-rinsed or purchased 'certified' clean. All containers should be tightly sealed with screw cap lids.

[2] Storage temperatures quoted are nominal temperatures.

[3] Hold times are from time of sampling. Client negotiated requests for specific holding times or other method-specific holding times are adhered to. This 90 day holding time on freezing of aqueous samples is based on SGS AXYS storage stability studies. For aqueous samples under DoD accreditation, the sample hold time is ≤14 days.

[4] Hold times for sample extracts are from time of extraction with storage at 4°C. This 30-day holding time is a guideline, longer hold times may be accepted based on professional judgement. For samples under DoD accreditation the extract hold time is ≤28 days with storage at room temperature.

## SGS AXYS Analytical Services Ltd.

### Stability of PFAS in Aqueous Samples

SGS AXYS has completed an extended-time storage study for the 29 PFAS listed in the table below. The study was conducted in reagent water, surface water and two wastewater treatment plant (WWTP) effluents. PFAS concentrations were measured at 0, 7, 14, 30, 90, and 180-day timepoints with data analysis of a 180-day timepoint in progress. Data analysis up to the 90-day timepoint shows that precursors present in samples containing matrix and biological activity can transform under room temperature and cold storage conditions within 7 days. At this time, only freezing of aqueous samples was demonstrated to stabilize the analytes over a period of up to 90 days. We are recommending freezing non-potable aqueous samples as soon as practicable if not analyzed within 3-4 days.

### Summary of Analyte Stability in Aqueous Samples by Storage Condition

| | Stability (days) | | Remarks |
|---|---|---|---|
| **Analyte** | **4°C** | **-20°C** | |
| $C_4$-$C_{14}$ Perfluorinated carboxylates including PFOA | 90 | 90 | |
| $C_4$-$C_{10}$ perfluorinated sulfonates including PFOS | 90 | 90 | |
| PFDoS | 90 | 90 | |
| 4:2 FTS | 90 | 90 | |
| 6:2 FTS | 90 | 90 | |
| 8:2 FTS | 14 | 90 | Decreasing trend seen from day 7 at 4°C |
| PFOSA | 14 | 90 | Increasing trend seen day 14 onwards at 4°C |
| N-MeFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-EtFOSA | 7 | 90 | Decreasing trend seen at first stability point 4°C |
| N-MeFOSAA | <7 | 90 | Increase from transformation of MeFOSE |
| N-EtFOSAA | 7 | 90 | Increase from transformation of EtFOSE |
| N-MeFOSE | <7 | 90 | Loss seen at first stability point 4°C |
| N-EtFOSE | <7 | 90 | Loss seen at first stability point 4°C |

(1) Where applicable, custom lab flags have been used on this report; U = not detected at RL; R = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration; J = concentration less than limit of quantification; E = exceeds calibrated linear range, see dilution data.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = minimum reporting level.

These data are validated and reported as accurate and in accord with SGS AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.
