

Conceptual Drinking Water Supply Plan: Status Update and Proposed Path Forward

Hannah Albertus-Benham and Shalene Thomas (Wood)

3M PFC Settlement Work Group/Subgroup Meetings

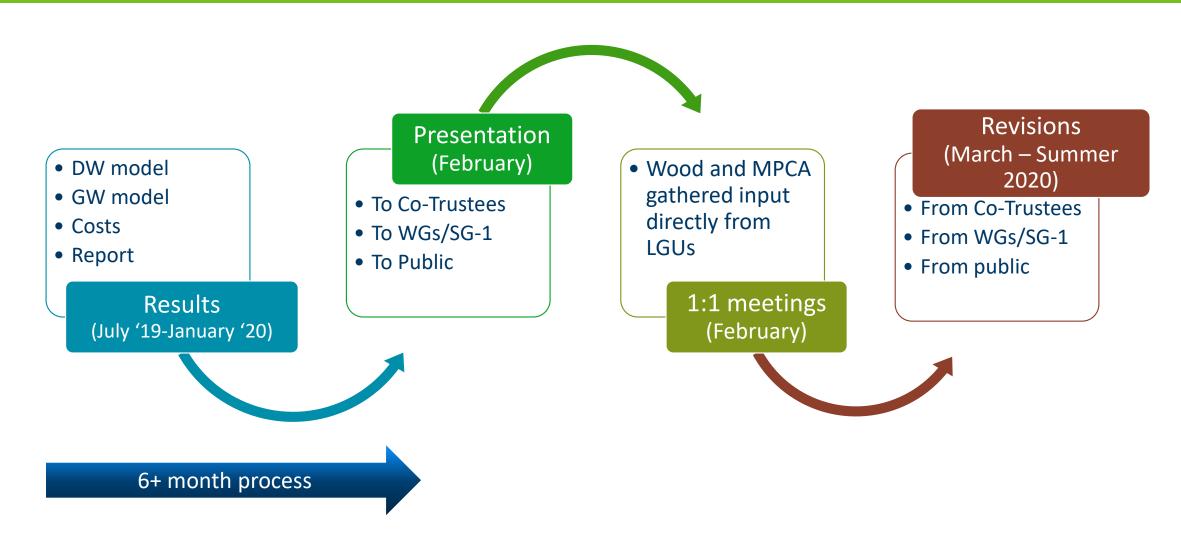

April 14-15, 2020

Agenda

Overview

Overview

Feedback

Sent out RFI for revised water demands

- Received updates for Lake Elmo, Oakdale, and Woodbury
- Confirmation of existing demands from Cottage Grove, Newport, Maplewood, and West Lakeland
- No response is assumed to mean no change is requested
- Overall increase of 15% ADD, 17% MDD, and 3% GPCPD, while population served increased 2%

Lake Elmo	2040		% Difference
	WSP	REVISED	from WSP
Per Capita Demand (GPCPD)	85	96	13%
ADD (MGD)	1.799	2.032	13%
MDD (MGD)	5.4	6.1	13%

Woodbury	2040		% Difference
	Comp Plan	REVISED	from Comp Plan
Total Population	87,800	89,630	2%
Population Served	83,139	88,139	6%
Per Capita Demand (GPCPD)	95	123	29%
ADD (MGD)	7.8	10.84	39%
MDD (MGD)	19.5	28.19	45%

Oakdale	2040		% Difference
	WSP	REVISED	from WSP
Peaking factor	2.23	2.29	3%
ADD (MGD)	3.12	3.06	-2%
MDD (MGD)	6.96	7.00	<1%

- Revised water supply projections
 - Updates to scenarios iterative process
 - Place additional wells per community
 - Upsize hydraulic infrastructure (pipes, pumps, tanks, treatment vessels)
 - New GW modeling
 - Drawdown analyses
 - Flowpath analyses

East Metro model

- Completed:
 - Refinements to East Metro model
 - Finalize Appendices B and C
 - Prepared scope language and model input files for peer review

- In progress:
 - Additional flow path analyses in specific areas
 - Capture POETs past flow path predicted areas?
 - Considering flow paths of Baytown TCE plume
 - Add a table of drawdowns for each scenario

Costs

- GAC and IX assumptions
 - Tying costs (media consumption rates) to PFOA concentrations
- City codes related to land acquisition costs
 - Reviewed codes regarding set backs and green space for Cottage Grove and Woodbury;
 and
 - Are adjusting unit cost assumptions accordingly for <u>all</u> communities/scenarios.

General

- Revised municipal well HI values
- Received Baytown TCE data GACs installed and sampling data
- Re-assessing private well counts in Afton and West Lakeland still evaluating
- Add a table of neighborhood hookups for each community in Appendix E

Separate scope items

- Groundwater model peer review
 - Currently finalizing scope
 - AECOM completing peer review over a 2 month period beginning in April
- White Bear Lake model (NMLG)
 - DNR completing modeling of scenarios simultaneous to Wood East Metro modeling
- Water Rate Impacts still evaluating

Input Requested (SG-1)

Input requested

Easements

- Currently assuming 100% transmission mains need easements
- Sensitivity analysis performed
- Received feedback from Maplewood and West Lakeland on assumptions
- LGUs provide feedback on any specific changes to assumptions for new infrastructure

Community-specific Regional At 100% - average land At 100% - average cost of acquisition cost of \$30.9 M, land acquisition is \$25M, the cost of easements is average cost of easements \$30.1 M. and easements is \$22 M, and is 88% of land accounts for 98% of land acquisition costs. acquisition costs. At 50% - average land At 50% - average land acquisitions costs are acquisitions costs are reduced by \$11 M reduced by \$15 M. At 0% - average land At 0% - average land acquisition costs are acquisition costs are reduced by \$22M reduced by \$30.1 M.

Approach and Timeline

Approach moving forward

Incorporate WG/SG-1 feedback

March-May

The Co-Trustees begin refining scenarios.

Summer

Report results back to Co-Trustees

May

Present and request feedback on Good/Better/Best scenarios

<u>Fall</u>

Scenario updates

Scenarios

- ☐ Community-specific
- ☐ Integrated
- ☐ Treatment
- ☐ Regional:
 - Sub-regional (three groundwater well fields)
 - One Regional Surface Water Plant
 - Two Regional Surface Water Plants
 - St Paul Regional Water Services

Questions
